

FILLING & PLACING SANDBAGS

SANDBAGS

Sandbags, when properly filled and placed, will redirect storm and debris flow away from property improvements.

FILLING

Fill sandbags one-half full. Sand is suggested if readily available; however, sand is not mandatory, any local soil may be used.

PLACING

Fold top of sandbag down and rest bag on its folded top.

It is important to place bags with the folded top toward the upstream or uphill direction to prevent bags from opening when water runs by them.

Care should be taken to stack sandbags in accordance with the illustrations. Place each sandbag as shown completing each layer prior to starting the next layer. Limit placement to two layers unless a building is used as a backing or sandbags are pyramided (staggered layers).
