RE: EMERGENCY RESPONSE WEBSITE & DESIGNATED SPOKESPERSON

One of the many challenges of disaster management is making sure that centralized information is available in a timely manner.

Currently, there is a lot of mixed information circulating in our community through different delivery systems. Each person has to find these sources of information. There is City Email Alerts along with local groups such as Next Door, La Quinta News, etc.. The result is conflicting, limited, and outdated information.. You have to:

- Know that these avenues of information exist!
- Find them
- Sign up for each one of them
- Hope the information is correct.

This maze of information is confusing, time-consuming, and difficult to navigate. And not all information is useful.

Rural Health Information Hub states: “The primary audience for dissemination of disaster information is typically the local community affected by the emergency or disaster event. Disseminating information **centrally** ensures transparency with the community. **Central information keeps individuals and organizations informed of preparedness, response, and recovery efforts.**”

MY RECOMMENDATIONS ARE:

1. **CREATE ACCESS TO A CENTRAL WEBSITE.** A one-stop shop with real-time natural disaster information. The website would include time-stamped updates and reliable links with warnings about current, real-time dangers/damages such as:

- Evacuation orders
- Rising river levels
- Power outages
- Available resources (including **reliable** social media accounts)
- Volunteer requests
- Whether water is safe to drink
- Which roads are safe to be on

For example: Preparation and Response information during Tropical Storm Hilary could not be found in one location and was not always accurate or updated which led to fear, chaos, confusion, congestion, and potential danger.

When supplies of sand and sandbags ran out at fire stations, nobody seems to know if or when the supplies were going to be replenished – not the people manning the fire stations or the citizens looking for sand and sandbags. People were scared and angry and raced from one fire station to another wondering if they would be able to find some supplies. Different information was circulating about where to find supplies and a significant time lag occurred before information became available. A centrally posted update of available supplies would have eliminated misunderstandings and frustration. It cuts through the clutter of all the information surrounding the emergency and offers time-saving solutions, rock-solid advice.

2. DESIGNATE A SPOKESPERSON to present daily live updates like the coordinated briefings made by Cal Fire Spokesperson during disasters. The briefings transcripts could be broadcasted live by the City Spokesperson at the same time (or times) every day on the radio, TV and on City Disaster website, etc. This type of communication and transparency would create a shared understanding and reduce misinformation. It builds trust and offers hope as the chaos unfolds. The Spokesperson could take questions during these live broadcasts and post answers in real-time on the website. Questions could be emailed in and answers could be posted.

By adopting a "simple" approach to complex problems and concentrating on which information is most useful, we can achieve clarity of communication and improve immediate responses. **A central website will help simplify information to help us take focused actions during pressing challenges.**

Effective communication saves lives and is a critical component of emergency management. Having ACCESS TO A CENTRAL WEBSITE AND A DESIGNATED SPOKESPERSON will keep our community on the same page and unite us with trustworthy, real-time information.

I hope you and your team will create a CENTRAL WEBSITE AND DESIGNATE A SPOKESPERSON to make it more effective to help the people and the community we love.

You don't often get email from daveheckman716@gmail.com. [Learn why this is important](#)

Dear MS. Nelson, I'm writing this to you because the email address to Deborah McGarrey will not open, so as per your instructions I'm sending this to you to forward to her before tonight's council meeting.. To: Deborah McGarrey I'm writing to you to demand a Grand Jury investigation into this fraudulent bankruptcy filed by Robert Green and his various Companies who are trying to avoid criminal prosecution for his actions and dealings with our City and other businesses throughout the Coachella Valley.. Isn't time for the City to stop doing business with a crook and thief? This should be time for you to stop the fraud. Sincerely, David Heckman

Subject: City Council members - YouTube video links to Jefferson St Extension and also Avenue 62 dike Travertine hearing

Good day. I hope this will be helpful to you. I am attaching a YouTube link that shows a drive of one mile of the Jefferson Street Extension. The file below shows where the trip started. It is the one circle with a black border. The significant things I would like to point out is that it is pretty flat, it can be to the east more to get further away from the Quarry wall, and the road already is below the Quarry wall and could be graded even lower if need be. There is no dike to cross until you are far from the Quarry. The first dike is at the end of the one mile trip and it is significantly smaller. And far from everyone. The drive went from the one circle with black around it, to the other circle where it says 1.01.

<https://youtu.be/2UKPt9qFQU8>

This second video is taken climbing up the Avenue 62 roadway to the top of the dike. Then you can see the irrigation ponds, back down Avenue 62, the duct tape that shows the bottom of the roadway which is 6 feet above the dike. Above the 6 foot mark, the vehicles (discounting motorcycles) can typically be 5 feet high to 13.5 feet high. And of course you can see Trilogy residences. Keep in mind, where I am taking this video is below the 6 foot elevated roadway,

RE: Travertine

To City of La Quinta:

On behalf of the Desert Valleys Builders Association (DVBA), representing nearly 150 companies within the construction and development industries, we are supportive of entities that hire local, provide quality community amenities, along with providing the opportunity of homeownership to those seeking residency in La Quinta.

This project will provide housing, along with other lifestyle & community amenities that the residents of the City of La Quinta can enjoy. This new community will be creating much needed jobs, both temporary and permanent, that will assist with economic benefits to the City. Additional benefits to the community – such as sales tax & local purchase revenues, along with other types of financial spending will also provide positive economic assistance to the City.

Thank you

Gretchen Gutierrez
CEO

Desert Valleys Builders Association

To: Linda Evans; John Pena; Kathleen Fitzpatrick; Deborah McGarrey; Steve Sanchez; City Clerk Mail
Subject: Written Comments - John Miller, La Quinta, Travertine Development

Dear Madam Mayor and Council Members,

I am John Miller, and I own 81455 Golden Poppy Way in Trilogy La Quinta. I have lived in La Quinta for over 24 years and am happy to call it my home. As a Realtor, I have represented over 1,300 clients over the past 21 years, most of whom chose Trilogy La Quinta for its remote, peaceful, and tranquil location backing up to the Santa Rosa Mountains.

I am writing to express my strong opposition to the proposed 1200-home Travertine development, particularly the planned primary arterial access routed through Avenue 62. As a resident and community advocate, I have several significant concerns about this development's adverse impacts on our area.

Firstly, the proposed bridge over the existing dike on Avenue 62 to facilitate access to Travertine will dramatically increase noise and traffic throughout our community. This surge in traffic will result in higher emissions and greenhouse gases, which is counterproductive to our collective efforts to reduce our environmental footprint and combat climate change. The influx of vehicles will contribute to air pollution, negatively impacting the health and well-being of current residents.

Moreover, the noise generated by the increased traffic, mainly from vehicles crossing the newly constructed bridge, will disrupt the tranquility of our neighborhood. The residents of Trilogy La Quinta chose this community for its peaceful environment, and introducing this development will undermine the quality of life we currently enjoy. The constant noise pollution will be a source of stress and discomfort for many residents, especially those closest to Avenue 62.

Another critical concern is the potential impact on the local wildlife, specifically the Bighorn sheep that inhabit this region. The construction and increased human activity will likely disturb their natural habitat, threatening survival. Protecting our local wildlife is essential, and the proposed development poses a significant risk to these animals.

Additionally, the infrastructure in our area may need to be equipped to handle the substantial increase in traffic and population density. The strain on local roads, public services, and amenities could lead to congestion and reduced service quality, further diminishing the living standards for current and future residents.

In conclusion, I strongly urge the city council to reconsider the access plan for the Travertine development. Routing the main arterial through Avenue 62 is not sustainable or community-friendly. I

recommend exploring alternative access points that will minimize the environmental impact, preserve the peace of existing neighborhoods, and protect our local wildlife.

Thank you for your attention to this matter. I trust that the city council will take these concerns seriously and decide to prioritize the well-being of current residents and the environment.

Sincerely,

John K Miller

**RE: City Council Public Hearing Agenda Item No. 2 -
Travertine Specific Plan Project, Draft & Final Environmental
Impact Report [SCH 2018011023]**

Dear Mayor Evans, Honorable Councilmembers and Ms. Flores,

On behalf of the Western States Regional Council of Carpenters (“**Western States Carpenters**” or “**WSRCC**”), our firm is submitting these comments to the City of La Quinta (“**City**”) in connection August 6, 2024 City Council hearing regarding the Travertine Specific Plan Project (“**Project**”), as well as the Draft Environmental Impact Report (“**DEIR**”) and Final Environmental Impact Report (“**FEIR**”; collectively, “**EIR**”) associated therewith.

The Project includes development of a mix of uses including up to 1,200 dwelling units of varying residential product types and two community parks (east and west) on 378.8 acres; a 38.3-acre resort/spa facility with a 45,000-square-foot boutique hotel with a 175-seat restaurant, 97,500 square feet of resort villas, and 8,700 square feet of spa and wellness center, as well as yoga and tennis courts; a 46.2-acre resort/golf facility with a 5,500-square-foot golf academy, a 1,000-square-foot clubhouse, and 10,000-square-foot banquet restaurant (500-seat capacity).

The Western States Carpenters is a labor union representing over 90,000 union carpenters in 12 states, including California, and has a strong interest in well-ordered

land use planning and in addressing the environmental impacts of development projects. Individual members of the Western States Carpenters live, work, and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

The Western States Carpenters expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

The Western States Carpenters incorporates by reference all comments raising issues regarding the Environmental Impact Report (EIR) submitted prior to certification of the EIR for the Project. See *Citizens for Clean Energy v. City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project's environmental documentation may assert any issue timely raised by other parties).

I. THE CITY'S FEIR FAILED TO RESPOND TO AND ADDRESS WSRCC'S COMMENTS REGARDING PROJECT'S DEIR.

WSRCC has previously submitted written comments to the City concerning the Project's DEIR and the deficiencies therein on May 28, 2024, and June 25, 2024. Notwithstanding, the FEIR for the Project makes no mention of such comments and provides no response to them whatsoever, nor does it provide responses to any other written public comments concerning the DEIR that were received by the City after the close of the DEIR's 45-day comment period. WSRCC's prior comments also have not been included for the City Council's consideration as part of the City's Agenda Packet for the August 6, 2024, hearing on the Project (to which this correspondence is directed).

Moreover, the resolution adopted by the Planning Commission at its June 25, 2024 hearing on the Project included the Planning Commission's recommendation to the City Council that the EIR for the Project be certified, but the Project's FEIR was not even considered by Planning Commission on that date because the FEIR had yet to be released. This apparent procedural sidestep sits in stark contrast to the procedure followed by the City in connection with its recent certification of the EIR in the Coral Mountain Resort project (for which the City's Planning Commission considered the

FEIR and adopted a resolution recommending its certification to the City Council), as well as undermines California’s environmental review process and violates the CEQA. The CEQA Guidelines require the Lead Agency on a project to prepare a FEIR prior to approving a project. (CEQA Guidelines § 15089(a) – “The Lead Agency shall prepare a final EIR before approving the project.”) The required contents of a FEIR are prescribed by CEQA Guidelines § 15132, which are as follows:

- (a) The draft EIR or a revision of the draft.
- (b) Comments and recommendations received on the draft EIR either verbatim or in summary.
- (c) A list of persons, organizations, and public agencies commenting on the draft EIR.
- (d) The responses of the Lead Agency to significant environmental points raised in the review and consultation process.
- (e) Any other information added by the Lead Agency.

CEQA Guidelines § 15132.

Here, as it stands, and based on the public comments (from WSRCC and others) regarding the Project and its DEIR that the City received regarding significant environmental points on the Project, the City will have violated CEQA if it continues its failure to respond to said public comments prior to proceeding with certification of the Project’s EIR.

Thus, absent revision and recirculation of a proper and complete FEIR for the Project, no certification of the EIR can permissibly occur. The City must remedy this procedural deficiency, and the City Council should not proceed with adopting any resolutions pertaining to the Project until this CEQA violation is cured.

II. THE CITY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY’S ECONOMIC DEVELOPMENT AND ENVIRONMENT

The City should require the Project to be built using a local workers who have graduated from a Joint Labor-Management Apprenticeship Program approved by the State of California, have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state-approved apprenticeship training program, or who are registered apprentices in a state-approved apprenticeship training program.

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

[A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021, SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

[L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California’s workforce can positively affect returns on climate mitigation efforts. In other words, well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.¹

Furthermore, workforce policies have significant environmental benefits given that they improve an area’s jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that that the “[u]se of a local state-certified apprenticeship program” can result in air pollutant reductions.²

¹ California Workforce Development Board (2020) Putting California on the High Road: A Jobs and Climate Action Plan for 2030 at p. ii, available at <https://laborcenter.berkeley.edu/wp-content/uploads/2020/09/Putting-California-on-the-High-Road.pdf>.

² South Coast Air Quality Management District (May 7, 2021) Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.³

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.⁴ Some municipalities have even tied local hire and other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city's First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022,

Supporting Budget Actions, *available at* <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf?sfvrsn=10>.

³ California Planning Roundtable (2008) Deconstructing Jobs-Housing Balance at p. 6, *available at* <https://cproundtable.org/static/media/uploads/publications/cpr-jobs-housing.pdf>

⁴ Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? *Journal of the American Planning Association* 72 (4), 475-490, 482, *available at* <http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf>.

otherwise known as Assembly Bill No. 2011 (“**AB2011**”). AB2011 amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

III. THE CITY SHOULD IMPOSE TRAINING REQUIREMENTS FOR THE PROJECT’S CONSTRUCTION ACTIVITIES TO PREVENT COMMUNITY SPREAD OF COVID-19 AND OTHER INFECTIOUS DISEASES

Construction work has been defined as a Lower to High-risk activity for COVID-19 spread by the Occupational Safety and Health Administration. Recently, several construction sites have been identified as sources of community spread of COVID-19.⁵

The Western States Carpenters recommend that the City adopt additional requirements to mitigate public health risks from the Project’s construction activities. The Western States Carpenters requests that the City require safe on-site construction work practices as well as training and certification for any construction workers on the Project Site.

In particular, based upon the Western States Carpenters’ experience with safe construction site work practices, the Western States Carpenters recommends that the City require that while construction activities are being conducted at the Project Site:

Construction Site Design:

- The Project Site will be limited to two controlled entry points.
- Entry points will have temperature screening technicians taking temperature readings when the entry point is open.

⁵ Santa Clara County Public Health (June 12, 2020) COVID-19 CASES AT CONSTRUCTION SITES HIGHLIGHT NEED FOR CONTINUED VIGILANCE IN SECTORS THAT HAVE REOPENED, *available at* <https://www.sccgov.org/sites/covid19/Pages/press-release-06-12-2020-cases-at-construction-sites.aspx>.

- The Temperature Screening Site Plan shows details regarding access to the Project Site and Project Site logistics for conducting temperature screening.
- A 48-hour advance notice will be provided to all trades prior to the first day of temperature screening.
- The perimeter fence directly adjacent to the entry points will be clearly marked indicating the appropriate 6-foot social distancing position for when you approach the screening area. Please reference the Apex temperature screening site map for additional details.
- There will be clear signage posted at the project site directing you through temperature screening.
- Provide hand washing stations throughout the construction site.

Testing Procedures:

- The temperature screening being used are non-contact devices.
- Temperature readings will not be recorded.
- Personnel will be screened upon entering the testing center and should only take 1-2 seconds per individual.
- Hard hats, head coverings, sweat, dirt, sunscreen or any other cosmetics must be removed on the forehead before temperature screening.
- Anyone who refuses to submit to a temperature screening or does not answer the health screening questions will be refused access to the Project Site.
- Screening will be performed at both entrances from 5:30 am to 7:30 am.; main gate [ZONE 1] and personnel gate [ZONE 2]
- After 7:30 am only the main gate entrance [ZONE 1] will continue to be used for temperature testing for anybody

gaining entry to the project site such as returning personnel, deliveries, and visitors.

- If the digital thermometer displays a temperature reading above 100.0 degrees Fahrenheit, a second reading will be taken to verify an accurate reading.
- If the second reading confirms an elevated temperature, DHS will instruct the individual that he/she will not be allowed to enter the Project Site. DHS will also instruct the individual to promptly notify his/her supervisor and his/her human resources (HR) representative and provide them with a copy of Annex A.

Planning

- Require the development of an Infectious Disease Preparedness and Response Plan that will include basic infection prevention measures (requiring the use of personal protection equipment), policies and procedures for prompt identification and isolation of sick individuals, social distancing (prohibiting gatherings of no more than 10 people including all-hands meetings and all-hands lunches) communication and training and workplace controls that meet standards that may be promulgated by the Center for Disease Control, Occupational Safety and Health Administration, Cal/OSHA, California Department of Public Health or applicable local public health agencies.⁶

The United Brotherhood of Carpenters and Carpenters International Training Fund has developed COVID-19 Training and Certification to ensure that Carpenter union members and apprentices conduct safe work practices. The Agency should require that

⁶ See also The Center for Construction Research and Training, North America's Building Trades Unions (April 27 2020) NABTU and CPWR COVID-19 Standards for U.S. Construction Sites, available at https://www.cpwr.com/sites/default/files/NABTU_CPWR_Standards_COVID-19.pdf; Los Angeles County Department of Public Works (2020) Guidelines for Construction Sites During COVID-19 Pandemic, available at https://dpw.lacounty.gov/building-and-safety/docs/pw_guidelines-construction-sites.pdf.

all construction workers undergo COVID-19 Training and Certification before being allowed to conduct construction activities at the Project Site.

The Western States Carpenters has also developed a rigorous Infection Control Risk Assessment (“**ICRA**”) training program to ensure it delivers a workforce that understands how to identify and control infection risks by implementing protocols to protect themselves and all others during renovation and construction projects in healthcare environments.⁷

ICRA protocols are intended to contain pathogens, control airflow, and protect patients during the construction, maintenance and renovation of healthcare facilities. ICRA protocols prevent cross contamination, minimizing the risk of secondary infections in patients at hospital facilities.

The City should require the Project to be built using a workforce trained in ICRA protocols.

IV. THE CITY MUST REVISE AND RECIRCULATE THE EIR FOR THE PROJECT

CEQA is a California statute designed to inform decision makers and the public about the potential, significant environmental effects of a project. 14 California Code of Regulations (“**CEQA Guidelines**”) § 15002(a)(1).⁸ At its core, “[i]ts purpose is to inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made.” *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal. 3d 553, 564.

To achieve this purpose, CEQA mandates preparation of an Environmental Impact Report (“**EIR**”) for projects so that the foreseeable impacts of pursuing the project can be understood and weighed. *Communities for a Better Environment v. Richmond* (2010)

⁷ For details concerning the Western States Carpenters’ ICRA training program, *see* <https://icrahealthcare.com/>.

⁸ The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 15000 *et seq.*, are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. (Cal. Pub. Res. Code § 21083.) The CEQA Guidelines are given “great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous.” *Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal. 4th 204, 217.

184 Cal. App. 4th 70, 80. The EIR requirement “is the heart of CEQA.” CEQA Guidelines, § 15003(a).

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. The EIR’s function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that the public is assured those consequences have been considered. For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Communities for a Better Environment v. Richmond* (2010) 184 Cal. App. 4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal. 4th 412, 449–450).

Section 15088.5(a) of the CEQA Guidelines provides that an EIR must be recirculated whenever there is disclosure of significant new information. Significant new information includes: (1) disclosure of a new significant environmental impact resulting from the project or from a new proposed mitigation measure; (2) disclosure of a substantial increase in the severity of an environmental impact unless mitigation measures are adopted that reduce the impact to a level of insignificance; and (3) disclosure of a feasible project alternative or mitigation measure considerably different from others previously analyzed which would clearly lessen the significant environmental impacts of the project which the project proponents decline to adopt. *Id.*

Additionally, an EIR must be recirculated when it is so fundamentally inadequate and conclusory in nature that meaningful public review and comment is precluded. *Id.* [citing *Mountain Lion Coalition v. Fish & Game Com.* (1989) 214 Cal.App.3d 1043].

Here, as discussed below, the DEIR fails to substantiate all of its conclusions to allow meaningful public review and comment, provide adequate mitigation measures, and fully assess all pertinent environmental factors. Accordingly, this comment letter discloses significant new information, necessitating revision and recirculation of the DEIR.

A. The DEIR’s Alternatives Are Legally Inadequate

An EIR must discuss a reasonable range of alternatives to the project, which “shall include those that could feasibly accomplish most of the basic objectives of the project and could avoid or substantially lessen one or more of the significant effects.” CEQA Guidelines § 15126.6(a)&(c). “[T]he discussion of alternatives shall focus on alternatives.... which are capable of avoiding or substantially lessening any significant effects of the project....” CEQA Guidelines § 15126.6(b). Further, an EIR is legally inadequate if it contains an overly narrow range of alternatives. *Watsonville Pilots Ass’n v. City of Watsonville* (2010) 183 Cal.App.4th 1059, 1087, 20190 [not considering a reduced development alternative was error].

Here, the DEIR considered a (1) no project alternative; (2) an originally approved specific plan alternative; and (3) a phase 1 only alternative. DEIR at 7-42. However, the DEIR notes that both build alternatives it considered would continue to result in similar or greater aesthetic, geology & soils, hazards & hazardous material, hydrology & water quality, land use planning, population & housing, public services, recreation, and utility impacts. *Id.* Accordingly, the DEIR fails to consider a reasonable range of alternatives which could eliminate or reduce the Project’s significant impacts, as required.

B. The DEIR’s Mitigation Measures Are Insufficient

A fundamental purpose of an EIR is to identify ways in which a proposed project's significant environmental impacts can be mitigated or avoided. Pub. Res. Code §§ 21002.1(a), 21061. To implement this statutory purpose, an EIR must describe any feasible mitigation measures that can minimize the project's significant environmental effects. PRC §§ 21002.1(a), 21100(b)(3); CEQA Guidelines §§ 15121(a), 15126.4(a).

If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has “eliminated or substantially lessened all significant effects on the environment where feasible” PRC §§ 21002; 21002.1, 21081; CEQA Guidelines §§ 15091, 15092(b)(2)(A); and find that ‘specific overriding economic, legal, social, technology or other benefits of the project outweigh the significant effects on the environment.’ PRC §§ 21002; 21002.1, 21081; CEQA Guidelines §§ 15091, 15092(b)(2)(B). “A gloomy forecast of environmental degradation is of little or no value without pragmatic, concrete means to minimize the

impacts and restore ecological equilibrium.” *Environmental Council of Sacramento v. City of Sacramento* (2006) 142 Cal.App.4th 1018, 1039.

CEQA mitigation measures proposed and adopted are required to describe what actions will be taken to reduce or avoid an environmental impact. (CEQA Guidelines § 15126.4(a)(1)(B) [providing “[f]ormulation of mitigation measures should not be deferred until some future time.”].) While the same Guidelines section 15126.5(a)(1)(B) acknowledges an exception to the rule against deferrals, such exception is narrowly proscribed to situations where it is impractical or infeasible to include those details during the project's environmental review.

According to CEQA Guidelines, “[w]hen an EIR has been prepared for a project, the Responsible Agency shall not approve the project as proposed if the agency finds any feasible alternative or feasible mitigation measures within its powers that would substantially lessen or avoid any significant effect the project would have on the environment.” CEQA Guidelines Section 15096(g)(2).

Here, the EIR’s mitigation measures are improperly deferred or fail to adequately mitigate the Project’s impacts as follows:

i. Biological Resources

Although the EIR imposes 40 mitigation measures to mitigate the Project’s biological resource impacts, several of the measures are insufficient. For example, mitigation measures BIO-26 and BIO-27 require pre-construction surveys solely for Le Conte thrashers and Burrowing Owls, despite the DEIR finding that the Project site may also contain black-tailed gnatcatcher (*Polioptila caerulea*), loggerhead shrike (*Lanius ludovicianus*), long-eared owl (*Asio otus*), osprey (*Pandion haliaetus*), and prairie falcon (*Falco mexicanus*). Compare DEIR at 1-20 – 1-21 with 4.4-10. Thus, BIO-27 should be revised to require pre-construction nesting bird surveys for all nesting birds rather than just for Le Conte thrashers.

Additionally, mitigation measure BIO-28, even as revised in the FEIR, defines the nesting season as February 1- August 31. Such a timeframe is inconsistent with the California Department of Fish and Wildlife’s (“CDFW”) finding that certain species “commence nesting activities in January. . . and nest later than August 31”⁹ The nesting

⁹ See CDFW November 18, 2021 letter to City of Adelanto at 3, available at <https://files.ceqanet.opr.ca.gov/273819->

period on the mitigation measures should be revised to account for these findings. The measures also fail to specify that surveys should be consistent with CDFW protocols. Such specification is necessary to ensure that the measure, and surveys which it requires, are adequate.

Absent such preparation and specifications, the measures are improperly deferred and cannot support the EIR’s less than significant biological resource impact finding.

Moreover, the Project would construct approximately 1,000 feet of the Jefferson Street roadway through and upon the Santa Rosa & San Jacinto Mountains Conservation Area, which has been designated as “Critical Habitat” by the U.S. Fish and Wildlife Service. No analysis is provided in the DEIR or FEIR as to if and how the Project intends to mitigate the associated impacts to the Conservation Area. Further still, as to the Project’s cumulative impacts on biological resources, in conjunction with the development of the neighboring Coral Canyon project and the Resort at Coral Mountain project, the Project will completely cut off Coral Mountain (an undeveloped mountain area north of the Project site within the City limits that has been documented as supporting Peninsular Bighorn Sheep) from the aforementioned federal Conservation Area. The Project’s EIR wholly ignores this impact and the associated habitat fragmentation that will result from the collective development of these three adjacent major development projects. To that end, additional study of the Project’s cumulative impacts on biological resources is absolutely warranted.

ii. Greenhouse Gas Emissions

The DEIR finds that the Project greenhouse gas (“**GHG**”) impacts will be significant and unavoidable. DEIR at 1-33. Thus, the EIR imposes several measures in attempt to mitigate such impacts, GHG-1 – GHG-10.

GHG-2 provides that “[a]ll residences shall incorporate roof-top solar panels, in-home batteries and EV charger stations to facilitate use of EVs, golf carts and other low-speed electric vehicles (LSEVs).” DEIR at 1-33. However, the measure fails to specify any quantities or minimum coverage for the solar panels, batteries, and charger stations.

Similarly, GHG-5 requires that “[a]ll non-residential components of the development where vehicle parking is provided shall also provide EV chargers” without in fact specifying any percentage of required chargers. DEIR at 1-34. Thus, the Project’s EIR must be revised to provide such specification in the mitigation measures.

Additionally, as stated in the Office of Planning Research’s (“**OPR**”) technical advisory in 2018:

VMT and Greenhouse Gas Emissions Reduction. Senate Bill 32 (Pavley, 2016) requires California to reduce greenhouse gas (GHG) emissions 40 percent below 1990 levels by 2030, and Executive Order B-16-12 provides a target of 80 percent below 1990 emissions levels for the transportation sector by 2050.

Despite the Project’s clear GHG emissions impact in direct contravention of SB 32’s GHG reduction goals, the EIR does not make an adequate effort to otherwise reduce the Project’s GHG impacts through other specific project design features aimed at reducing GHG emissions.

Moreover, the Project is not consistent with the CARB 2022 Scoping Plan. Indeed, the first action item in the Scoping Plan is reduce GHG emissions “40% below 1990 levels by 2030.”¹⁰ The CARB Scoping Plan also sets forth the action item that new residential and commercial buildings will have “[a]ll electric appliances beginning 2026 (residential) and 2029 (commercial), contributing to 6 million heat pumps installed statewide by 2030.”¹¹

Despite the clear path presented by the CARB Scoping Plan for reducing GHG emissions, the DEIR declines to hold the Project to that standard, and instead deflects its responsibility to mitigate significant GHG emissions impacts to the greatest degree possible, pursuant to CEQA’s mandate.

Indeed, it is the City’s obligation, as lead agency, to ensure that the Project’s environmental impacts have first been properly analyzed and then mitigated to a less than significant level wherever possible. WSRCC submits that the Project’s implementation of the additional potential mitigation measures set forth below (where applicable), as delineated by the California Air Pollution Control Officers

¹⁰ California Air Resources Board 2022 Scoping Plan at p. 72;

Association’s *Quantifying Greenhouse Gas Mitigation Measures*, would contribute toward the goal of reducing the Project’s GHG emission impacts to the maximum extent possible:

Energy						
Category	Measure Number	Strategy	BMP	Grouped With #	Range of Effectiveness	
					Percent Reduction in GHG Emissions	Basis
Building Energy Use	BE-1	Buildings exceed Title 24 Building Envelope Energy Efficiency Standards by X% (X is equal to the percentage improvement selected for the project)			For a 10% improvement over 2008 Title 24: Non-Residential electricity use: 0.2-5.5%; natural gas use: 0.7-10% Residential electricity use: 0.3-2.6%; natural gas use: 7.5-9.1%	
	BE-2	Install Programmable Thermostat Timers	x		BMP	
	BE-3	Obtain Third-party HVAC Commissioning and Verification of Energy Savings	x	BE-1	BMP	
	BE-4	Install Energy Efficient Appliances			Residential building: 2-4% Grocery Stores: 17-22%	Appliance Electricity Use
	BE-5	Install Energy Efficient Boilers			1.2-18.4%	Fuel Use
Alternative Energy Generation	AE-1	Establish Onsite Renewable Energy Systems-Generac			0-100%	
	AE-2	Establish Onsite Renewable Energy Systems-Solar Power			0-100%	
	AE-3	Establish Onsite Renewable Energy Systems-Wind Power			0-100%	
	AE-4	Utilize a Combined Heat and Power System			0-46%	
	AE-5	Establish Methane Recovery in Landfills			73-77%	
	AE-6	Establish Methane Recovery in Wastewater Treatment Plants			95-97%	
Lighting	LE-1	Install Higher Efficacy Public Street and Area Lighting			16-40%	Outdoor Lighting Electricity Use
	LE-2	Limit Outdoor Lighting Requirements	x		BMP	
	LE-3	Replace Traffic Lights with LED Traffic Lights			90%	Traffic Light Electricity Use

Transportation						
Category	Measure Number	Strategy	BMP	Grouped With #	Range of Effectiveness	
					Percent Reduction in GHG Emissions	Basis
Land Use / Location	LUT-1	Increase Density			1.5-30.0%	VMT
	LUT-2	Increase Location Efficiency			10-65%	VMT
	LUT-3	Increase Diversity of Urban and Suburban Developments (Mixed Use)			9-30%	VMT
	LUT-4	Incr. Destination Accessibility			6.7-20%	VMT
	LUT-5	Increase Transit Accessibility			0.5-24.6%	VMT
	LUT-6	Integrate Affordable and Below Market Rate Housing			0.04-1.20%	VMT
	LUT-7	Orient Project Toward Non-Auto Corridor			NA	
	LUT-8	Locate Project near Bike Path/Bike Lane			NA	
	LUT-9	Improve Design of Development			3.0-21.3%	VMT
Neighborhood / Site Design	SDT-1	Provide Pedestrian Network Improvements			0-2%	VMT
	SDT-2	Traffic Calming Measures			0.25-1.00%	VMT
	SDT-3	Implement a Neighborhood Electric Vehicle (NEV) Network			0.5-12.7%	VMT
	SDT-4	Urban Non-Motorized Zones		SDT-1	NA	
	SDT-5	Incorporate Bike Lane Street Design (on-site)		LUT-9	NA	
	SDT-6	Provide Bike Parking in Non-Residential Projects		LUT-9	NA	
	SDT-7	Provide Bike Parking in Multi-Unit Residential Projects		LUT-9	NA	
	SDT-8	Provide EV Parking		SDT-3	NA	
	SDT-9	Dedicate Land for Bike Trails		LUT-9	NA	
Parking Policy / Pricing	PDT-1	Limit Parking Supply			5-12.5%	
	PDT-2	Unbundle Parking Costs from Property Cost			2.6-13%	
	PDT-3	Implement Market Price Public Parking (On-Street)			2.8-5.5%	
	PDT-4	Require Residential Area Parking Permits		PDT-1, 2 & 3	NA	

Trip Reduction Programs	TRT-1	Implement Voluntary CTR Programs			1.0-6.2%	Commuter VMT
	TRT-2	Implement Mandatory CTR Programs – Required Implementation/Monitoring			4.2-21.0%	Commuter VMT
	TRT-3	Provide Ride-Sharing Programs			1-15%	Commuter VMT
	TRT-4	Implement Subsidized or Discounted Transit Prog.			0.3-20.0%	Commuter VMT
	TRT-5	Provide End of Trip Facilities		TRT-1, 2 & 3	NA	
	TRT-6	Telecommuting and Alternative Work Schedules			0.07-5.50%	Commuter VMT
	TRT-7	Implement Commuter Trip Reduction Marketing			0.8-4.0%	Commuter VMT
	TRT-8	Implement Preferential Parking Permit Program		TRT-1, 2 & 3	NA	
	TRT-9	Implement Car-Sharing Program			0.4-0.7%	VMT
	TRT-10	Implement School Pool Program			7.2-15.8%	School VMT
	TRT-11	Provide Employer-Sponsored Vanpool/Shuttle			0.3-13.4%	Commuter VMT
	TRT-12	Implement Bike-Sharing Program		SDT-5, LUT-9	NA	
	TRT-13	Implement School Bus Program			38-63%	School VMT
	TRT-14	Price Workplace Parking			0.1-19.7%	Commuter VMT
	TRT-15	Implement Employee Parking "Cash-Out"			0.6-7.7%	Commuter VMT

Transit System Improvements	TST-1	Provide a Bus Rapid Transit System			0.02-3.2%	VMT
	TST-2	Implement Transit Access Improvements		TST-3, TST-4	NA	
	TST-3	Expand Transit Network			0.1-8.2%	VMT
	TST-4	Increase Transit Service Frequency/Speed			0.02-2.5%	VMT
	TST-5	Provide Bike Parking Near Transit		TST-3, TST-4	NA	
	TST-6	Provide Local Shuttles		TST-3, TST-4	NA	
Road Pricing / Management	RPT-1	Implement Area or Cordon Pricing			7.9-22.0%	VMT
	RPT-2	Improve Traffic Flow			0-45%	VMT
	RPT-3	Require Project Contributions to Transportation Infrastructure Improvement Projects		RPT-2, TST-1 to 6	NA	
	RPT-4	Install Park-and-Ride Lots		RPT-1, TRT-11, TRT-3, TST-1 to 6	NA	
Vehicles	VT-1	Electrify Loading Docks and/or Require Idling-Reduction Systems			26-71%	Truck Idling Time
	VT-2	Utilize Alternative Fueled Vehicles			Varies	
	VT-3	Utilize Electric or Hybrid Vehicles			0.4-20.3%	Fuel Use

Water						
Category	Measure Number	Strategy	BMP	Grouped With #	Range of Effectiveness	
					Percent Reduction in GHG Emissions	Basis
Water Supply	WSW-1	Use Reclaimed Water			up to 40% for Northern California up to 81% for Southern California	Outdoor Water Use
	WSW-2	Use Gray Water			0-100%	Outdoor Water Use
	WSW-3	Use Locally-Sourced Water Supply			0-60% for Northern and Central California; 11-75% for Southern California	Indoor and Outdoor Water Use
Water Use	WUW-1	Install Low-Flow Water Fixtures.			Residential: 20% Non-Residential: 17-31%	Indoor Water Use
	WUW-2	Adopt a Water Conservation Strategy.			varies	
	WUW-3	Design Water-Efficient Landscapes			0-70%	Outdoor Water Use
	WUW-4	Use Water-Efficient Landscape Irrigation Systems			6.1%	Outdoor Water Use
	WUW-5	Reduce Turf in Landscapes and Lawns			varies	
	WUW-6	Plant Native or Drought-Resistant Trees and Vegetation			BMP	

Area Landscaping						
Category	Measure Number	Strategy	BMP	Grouped With #	Range of Effectiveness	
					Percent Reduction in GHG Emissions	Basis
Area Landscaping	A-1	Prohibit Gas Powered Landscape Equipment.			LADWP: 2.5-46.5% PG&E: 64.1-80.3% SCE: 49.5-72.0% SDGE: 38.5-66.3% SMUD: 56.3-76.0%	Fuel Use
	A-2	Implement Lawnmower Exchange Program			BMP	
	A-3	Electric Yard Equipment Compatibility			A-1 or A-2	BMP

Solid Waste						
Category	Measure Number	Strategy	BMP	Grouped With #	Range of Effectiveness	
					Percent Reduction in GHG Emissions	Basis
Solid Waste	SW-1	Institute or Extend Recycling and Composting Services			BMP	
	SW-2	Recycle Demolished Construction Material			BMP	

Vegetation						
Category	Measure Number	Strategy	BMP	Grouped With #	Range of Effectiveness

	Misc-4	Require Best Management Practices in Agriculture and Animal Operations	x		BMP	
	Misc-5	Require Environmentally Responsible Purchasing	x		BMP	
	Misc-6	Implement an Innovative Strategy for GHG Mitigation	x		BMP	

General Plan Strategies						
Category	Measure Number	Strategy	BMP	Grouped With #	Range of Effectiveness	
					Percent Reduction in GHG Emissions	Basis
General Plans	GP-1	Fund Incentives for Energy Efficiency	x		BMP	
	GP-2	Establish a Local Farmer's Market	x		BMP	
	GP-3	Establish Community Gardens	x		BMP	
	GP-4	Plant Urban Shade Trees	x	V-1	BMP	
	GP-5	Implement Strategies to Reduce Urban Heat-Island Effect	x		BMP	

(See *Quantifying Greenhouse Gas Mitigation Measures*, Tables 6-1 to 6-9, California Air Pollution Control Officers Association (CAPCOA), August 2010.¹²)

It is entirely feasible for the EIR to incorporate a substantial proportion of the foregoing measures for the Project as mandatory forms of mitigation against the Project's significant and unavoidable greenhouse gas impacts. More is required, and as

¹² Available at: <http://www.aqmd.gov/docs/default-source/ceqa/handbook/capcoa-quantifying-greenhouse-gas-mitigation-measures.pdf>

currently constituted, the EIR’s improper analysis and lack of appropriate mitigation on GHG impacts violates CEQA.

iii. Hazards and Hazardous Materials

Mitigation measure HAZ-1, even after revision in the FEIR, requires that “Prior to grading, Limited Phase II Subsurface Investigation shall be required. The Limited Phase II Subsurface Investigation shall be conducted by an Environmental Professional as defined in Section 312.10 of 40 CFR Part 312.” DEIR at 1-35; FEIR at 3-28. Thus, it appears as though no Limited Phase II Subsurface Investigation has been conducted yet, absent any explanation as to why it is not feasible to do so at this time.

Likewise, HAZ-8 requires that “[t]he Project shall consult an asbestos inspection consultant for a comprehensive asbestos survey prior to demolition of the project site”, without indicating why such consultation is not feasible at this time. Deferring formulation of the actual mitigation measure to some undefined time after the Project’s approval is improper and cannot be used as a mitigation measure.

CEQA forbids deferred mitigation. Guidelines § 15126.4(a)(1)(B). CEQA allows deferral of details of a mitigation measure only “when it is impractical or infeasible to include those details during the project’s environmental review.” (*Id.*) CEQA further requires: “that the agency (1) commits itself to the mitigation, (2) adopts specific performance standards the mitigation will achieve, and (3) identifies the type(s) of potential action(s) that can feasibly achieve that performance standard...” Guidelines § 15126.4(a)(1)(B).

In the context of HAZ-1 and HAZ-8, the City has failed all of these preconditions and requirements, as the EIR has failed to show why a Limited Phase II Subsurface Investigation and/or an asbestos survey cannot be completed or achieved at this time prior to adoption of the EIR, what impacts the measures will have individually or cumulatively, if those would indeed be feasible, and the specific performance criteria the Applicant will have to meet with regard to the measures. Accordingly, the proposed mitigation measures are improperly deferred as it defers the formulation of components of the mitigation to a later time, shifts the burden to the Applicant, and further does not explain how the measures will clearly reduce the hazards impacts to a level of insignificance.

Absent such preparation or specification, the EIR’s mitigation measures are improperly deferred.

iv. Noise

Mitigation measure NOI-5 provides that “[p]rior to water well drilling, the construction contractor shall provide a temporary 24-foot-high noise barrier capable of reducing noise during well construction activities to 80 dBA Leq or less.” DEIR at 1-39. However, there is no indication that any such temporary noise barrier(s) will also be moveable to ensure it properly reduces the sound of the construction noise at its source. As noted by the court in AIDS HEALTHCARE FOUNDATION v. CITY OF LOS ANGELES, LASC Case Number: 19STCP05445 (April 5, 2021):

“The City’s response actually concedes the flaw in the efficacy of MM 1-2 as it is written. Effective mitigation to sensitive receptors requires the noise barrier systems to be moved. The City argues MM 1-2 is effective because ‘the noise barriers are moveable, meaning that they move in concert with any piece of construction equipment to ensure the equipment does not operate with an unobstructed line of sight to a receptor.’ (Opposition Brief 35:15-17.) The City recognizes the barriers must be moveable ‘to shield construction activities, no matter where they occur onsite.’ (Opposition Brief 35:18-19.)

Despite the City’s recognition the noise barriers must be moved throughout the Project during construction to effectively mitigate construction-related noise, MM 1-2 does not require such movement. It is not about wordsmithing-it is about enforceability and efficacy. The City’s attempts to distinguish between ‘Project boundaries’ and ‘property boundaries’ is unpersuasive.²⁴ Such a distinction-if there is one-does not resolve the ambiguity. Nothing in MM 1-2 requires any noise barriers to be moved. ^{*25} Accordingly, the court finds substantial evidence does not support the City’s conclusion MM 1-2 is an effective mitigation measure.”

(Exhibit D, p. 20 [Ruling].)

Absent such specifications, the mitigation measure is legally inadequate and cannot support a finding that the Project’s noise impacts may be reduced to the level identified.

C. The DEIR Fails to Support its Findings on Land Use with Substantial Evidence

Each California city and county must adopt a comprehensive, long-term general plan governing development. *Napa Citizens for Honest Gov. v. Napa County Bd. of Supervisors* (2001) 91 Cal.App.4th 342, 352, citing Gov. Code §§ 65030, 65300. The general plan sits at the top of the land use planning hierarchy and serves as a “constitution” or “charter” for all future development. *DeVita v. County of Napa* (1995) 9 Cal.4th 763, 773; *Lesher Communications, Inc. v. City of Walnut Creek* (1990) 52 Cal.3d 531, 540.

General plan consistency is “the linchpin of California’s land use and development laws; it is the principle which infused the concept of planned growth with the force of law.” *Debottari v. Norco City Council* (1985) 171 Cal.App.3d 1204, 1213. It is well established that development projects may not be approved if they interfere with, or frustrate, the general plan’s policies and objectives. *See Napa Citizens*, 91 Cal.App.4th at 378-79; *see also Lesher*, 52 Cal.3d at 544.

Here, the EIR fails to analyze the consistency of the Project’s requested entitlements with the General Plan and Specific Plan. Specifically, amongst other entitlements, the Project requires a general plan amendment, zone change, specific plan amendment, tentative parcel map, and development plan approval. DEIR at 1-4. However, rather than specifically analyzing the consistency of such departures from the plans, the DEIR merely presumes that such entitlements are consistent because they “do not represent a substantial change to the character of the area envisioned in the General Plan. DEIR at p. 4.11-27. Thus, the EIR’s less than significant finding is unsupported and, for this reason too, the EIR must be revised and recirculated to conduct adequate consistency analysis for each individual entitlement requested.

D. The DEIR’s Hydrology and Water Quality Findings and Analysis Are Insufficient

CEQA requires that an EIR identify and discuss the significant effects of a Project, how those significant effects can be mitigated or avoided. CEQA Guidelines § 15126.2; PRC §§ 21100(b)(1), 21002.1(a). If a project has a significant effect on the environment, an agency may approve the project only upon finding that it has “eliminated or substantially lessened all significant effects on the environment where feasible” and that any unavoidable significant effects on the environment are “acceptable due to overriding concerns.” CEQA Guidelines § 15092(b)(2)(A–B). Such

findings must be supported by substantial evidence. CEQA Guidelines § 15091(b). The DEIR at hand fails to comply with these requirements.

Specifically, the DEIR provides that “[t]he proposed clearing, grading, and construction activities” have the potential to result in surface water quality impacts.” DEIR at p. 4.10-20. Such impacts are of particular concern given that the Project site is within 700 feet of critical habitat for the federally endangered Peninsular bighorn sheep. *Id.* at p. 4.4-12. Nevertheless, rather than in fact assessing the severity and probability of potential construction related water quality impacts, the DEIR merely concludes that such impacts will be less than significant because the Project will be required to comply with Construction General Permit requirements and best management practices. *Id.* at p. 4.10-20. Such a blanket conclusion runs afoul to CEQA because it is well established that determinations that regulatory compliance will be sufficient to prevent significant adverse impacts must be based on a project-specific analysis of potential impacts and the effect of regulatory compliance. See *Californians for Alternatives to Toxics v. Department of Food & Agric.* (2005) 136 Cal. App. 4th 1; *Ebbetts Pass Forest Watch v Department of Forestry & Fire Protection* (2008) 43 Cal. App. 4th 936, 956.

The EIR for the Project cannot rely upon regulatory compliance in making its less than significant impact determination without assessing and providing Project specific information and analysis as to its anticipated water quality impacts.

E. The DEIR Fails to Adequately Analyze the Project’s Cumulative Impacts.

An EIR must discuss a cumulative impact if the project’s incremental effect combined with the effects of other projects is “cumulatively considerable.” 14 C.C.R. §15130(a). This determination is based on an assessment of the project’s incremental effects “viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.” 14 C.C.R. §15065(a)(3); *Banning Ranch Conservancy v City of Newport Beach* (2012) 211 CA4th 1209, 1228. See also 14 C.C.R. §15355(b).

The CEQA Guidelines require that an EIR implement the provisions of Pub. Res. Code §21083(b)(2), which specifies that the Guidelines must include criteria requiring public agencies to find that a project may have a significant effect on the environment if its possible effects “are individually limited but cumulatively considerable.”

The purpose of the cumulative impacts analysis is to avoid considering projects in a vacuum, because failure to consider cumulative harm may risk environmental disaster. *Whitman v Board of Supervisors* (1979) 88 Cal.App.3d 397, 408 (citing *Natural Resources Defense Council v Callaway* (2d Cir 1975) 524 F2d 79). Without this analysis, piecemeal approval of several projects with related impacts could lead to severe environmental harm. *Golden Door Props., LLC v County of San Diego* (2020) 50 Cal.App.5th 467, 527; *San Joaquin Raptor/Wildlife Rescue Ctr. v County of Stanislaus* (1994) 27 Cal.App.4th 713, 720; *Las Virgenes Homeowners Fed'n v County of Los Angeles* (1986) 177 Cal.App.3d 300, 306. An adequate analysis of cumulative impacts is particularly important when another related project might significantly worsen the project's adverse environmental impacts. *Friends of the Eel River v Sonoma County Water Agency* (2003) 108 CA4th 859.

An EIR must discuss cumulative impacts when they are significant, and the project's incremental contribution is "cumulatively considerable." 14 C.C.R. §15130(a). A project's incremental contribution is cumulatively considerable if the incremental effects of the project are significant "when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects." 14 C.C.R. §15065(a)(3).

Here, the DEIR for the Project already notes that the Project is anticipated to have significant and unavoidable impacts in the areas of Air Quality and GHG Emissions, and that, absent implementation of extensive mitigation measures, the Project would otherwise be anticipated have significant impacts in the areas of Aesthetics, Biological Resources, Cultural Resources, Geology and Soils, Hazards and Hazardous Materials, Hydrology and Water Quality, Noise, and Public Services. Despite the wide scope of significant impacts presented by the Project on its own, the DEIR and FEIR contain no reference or consideration whatsoever of two major development projects planned to be constructed adjacent to the Project site.

The first is the Resort at Coral Mountain project, for which the City just certified an EIR on March 5, 2024, and which is due to be constructed less than a half mile from the Project's northeast edge. The Coral Mountain Resort project, as approved, will include development of 750 low-density residential units, a golf course, and 60,000 square feet of retail commercial construction, spanning 387 acres immediately northeast of Coral Mountain. The second adjacent project is the Coral Canyons project, in connection with which the City certified the Green Specific Plan on June 6, 1995, and later approved Tentative Tract Maps pursuant to adoption of a Mitigated

Negative Declaration. Coral Canyons, which is due to be constructed less than a half mile from the northwest edge of the Project, would consist of development of 219 single family lots on 317.61 acres directly west of Coral Mountain. The Jefferson Street roadway, on which the current Project is dependent for vehicular access and traffic flow, would necessarily run directly through the Coral Canyons project to the north.

Upon completion of construction of the Project, and in conjunction with these assorted neighboring projects, the entirety of Coral Mountain will be surrounded on all sides by nearly 1,000 acres of new development, where there was otherwise previously no adjacent development to be found. It defies belief, and CEQA, that the DEIR and FEIR makes absolutely no mention (let alone discussion and analysis) of these two adjacent major development projects, both of which are further along in their respective planning processes, when considering the cumulative impacts that the Project will have within the City.

Accordingly, the EIR must be revised and recirculated to consider and fully analyze the potential cumulative impacts presented by the Project in conjunction with the known development projects in its immediate vicinity. Absent doing so, the EIR will remain legally deficient, and any approval/certification of it in its current form will violate CEQA.

V. CONCLUSION

In sum, WSRCC requests that the City require a local workforce, that the City impose training requirements for the Project's construction activities to prevent community spread of COVID-19 and other infectious diseases, and that the City revise and recirculate the DEIR for the Project to address the aforementioned concerns. If the City has any questions, please do not hesitate to contact this office.

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise (“SWAPE”) is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas (“GHG”) emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model (“CalEEMod”) is a “statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects.”¹ CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.²

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.³

¹ “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

² “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

³ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled (“VMT”) associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.⁴

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

$$\text{“VMT}_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i)_n$$

Where:

n = Number of land uses being modeled.”⁵

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

$$\text{“Emissions}_{\text{pollutant}} = \text{VMT} * \text{EF}_{\text{running,pollutant}}$$

Where:

$\text{Emissions}_{\text{pollutant}}$ = emissions from vehicle running for each pollutant

VMT = vehicle miles traveled

$\text{EF}_{\text{running,pollutant}}$ = emission factor for running emissions.”⁶

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.⁷ In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act (“CEQA”) requires that such changes be justified by substantial evidence.⁸ The default number of construction-related worker trips is calculated by multiplying the

⁵ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 23.

⁶ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.

⁷ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

⁸ CalEEMod User Guide, available at: <http://www.caleemod.com/>, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.⁹ Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively.”¹⁰ Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.¹¹ The operational home-to-work vehicle trip lengths are:

“[B]ased on the *location* and *urbanization* selected on the project characteristic screen. These values were *supplied by the air districts or use a default average for the state*. Each district (or county) also assigns trip lengths for urban and rural settings” (emphasis added).¹²

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).¹³

Worker Trip Length by Air Basin		
Air Basin	Rural (miles)	Urban (miles)
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8
Mountain Counties	16.8	10.8
North Central Coast	17.1	12.3
North Coast	16.8	10.8
Northeast Plateau	16.8	10.8
Sacramento Valley	16.8	10.8
Salton Sea	14.6	11
San Diego	16.8	10.8
San Francisco Bay Area	10.8	10.8
San Joaquin Valley	16.8	10.8
South Central Coast	16.8	10.8
South Coast	19.8	14.7
Average	16.47	11.17
Minimum	10.80	10.80
Maximum	19.80	14.70
Range	9.00	3.90

¹⁰ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.

¹¹ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 14.

¹² “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 21.

¹³ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8- miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7- miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan (“Project”) located in the City of Claremont (“City”). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.¹⁴ In an effort to evaluate the potential for a local hire provision to reduce the Project’s construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,623
Amortized Construction GHG Emissions (MT CO ₂ e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,024
Amortized Construction GHG Emissions (MT CO ₂ e/year)	100.80
% Decrease in Construction-related GHG Emissions	17%

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project’s urbanization level and location.

¹⁴ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-85.

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Los Angeles-South Coast County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Village South Specific Plan (Proposed)
Los Angeles-South Coast County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Village South Specific Plan (Proposed)
Los Angeles-South Coast County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Amortized (MT CO2e/year)	100.80
<i>% Decrease in Construction-related GHG Emissions</i>	17%

EXHIBIT B

Paul Rosenfeld, Ph.D.

Principal Environmental Chemist

Chemical Fate and Transport & Air Dispersion Modeling

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H₂O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. \$41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: \$10,000 grant awarded to San Diego State University. Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. \$100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. \$20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: \$10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: \$15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. \$500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

- In the United States District Court For The District of New Jersey
Duarte et al, *Plaintiffs*, vs. United States Metals Refining Company et. al. *Defendant*.
Case No.: 2:17-cv-01624-ES-SCM
Rosenfeld Deposition. 6-7-2019
- In the United States District Court of Southern District of Texas Galveston Division
M/T Carla Maersk, *Plaintiffs*, vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS “Conti Perdido”
Defendant.
Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237
Rosenfeld Deposition. 5-9-2019
- In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants
Case No.: No. BC615636
Rosenfeld Deposition, 1-26-2019
- In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants
Case No.: No. BC646857
Rosenfeld Deposition, 10-6-2018; Trial 3-7-19
- In United States District Court For The District of Colorado
Bells et al. Plaintiff vs. The 3M Company et al., Defendants
Case: No 1:16-cv-02531-RBJ
Rosenfeld Deposition, 3-15-2018 and 4-3-2018
- In The District Court Of Regan County, Texas, 112th Judicial District
Phillip Bales et al., Plaintiff vs. Dow Agrosiences, LLC, et al., Defendants
Cause No 1923
Rosenfeld Deposition, 11-17-2017
- In The Superior Court of the State of California In And For The County Of Contra Costa
Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants
Cause No C12-01481
Rosenfeld Deposition, 11-20-2017
- In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois
Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants
Case No.: No. 0i9-L-2295
Rosenfeld Deposition, 8-23-2017
- In The Superior Court of the State of California, For The County of Los Angeles
Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC
Case No.: LC102019 (c/w BC582154)
Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018
- In the Northern District Court of Mississippi, Greenville Division
Brenda J. Cooper, et al., *Plaintiffs*, vs. Meritor Inc., et al., *Defendants*
Case Number: 4:16-cv-52-DMB-JVM
Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No.: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al., et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No.: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action NO. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward
DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City
Landfill, et al. Defendants.
Case No. 5:12-cv-01152-C
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas
Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant*.
Case Number cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio
John Michael Abicht, et al., *Plaintiffs*, vs. Republic Services, Inc., et al., *Defendants*
Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)
Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division
Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs*, vs. BP Products North America, Inc., *Defendant*.
Case 3:10-cv-00622
Rosenfeld Deposition: February 2012
Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland
Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants
Case Number: 03-C-12-012487 OT
Rosenfeld Deposition: September 2013

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

**Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review**

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989– 1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Colorado.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal representatives, Parker, AZ.

Other Experience:

Selected as subject matter expert for the California Professional Geologist licensing examination, 2009-2011.

EXHIBIT D

APR 05 2021

AIDS HEALTHCARE FOUNDATION v. CITY OF LOS ANGELES

Case Number: 19STCP05445

Hearing Date: March 3, 2021

Shari R. Carter, Executive Officer/Clerk of Court

**ORDER GRANTING PETITION FOR WRIT OF MANDATE AND COMPLAINT FOR
INJUNCTIVE RELIEF**

Through its Verified Petition for Writ of Mandate and Complaint for Injunctive Relief (the petition) Petitioner, AIDS Healthcare Foundation, challenges the certification of an environmental impact report (EIR) by Respondent, the City of Los Angeles. Petitioner seeks an order requiring the City to “vacate and withdraw the certification of the EIR and all Project Entitlements” (Pet., Prayer ¶ A.) Petitioner contends it is entitled to relief because the City violated the California Environmental Quality Act (CEQA) (Pub. Resources Code §§ 21000 et seq.).

Both the City and Real Party in Interest, Southern California Flower Growers, Inc. (Flower Growers) oppose the petition.

The petition is granted.

STATEMENT OF THE CASE¹

The Project:

The project is a mixed-use development located on just under four acres in the downtown area of the City.² The site is currently the Southern California Flower Market, a wholesale market owned and occupied by the Flower Growers. (AR 778, 810, 866-67.) The project site contains two buildings; the South Building, which was built in 1962 or 1963, and the North Building, which was built as part of the flower market’s expansion in 1981. (AR 778, 866-868.) The buildings are two stories with a parking deck above. (AR 868.)

The project renovates and upgrades the North building, which will continue to operate as a flower market. The project will demolish the South Building and replace it with a new twelve story, mixed-use development comprised of 323 residential units and 167,248 square feet of non-residential uses—retail, office, restaurant, wholesale storage and event space (the Project). (AR 719, 4462-4463.)

¹ AR refers to the administrative record.

² The site is bounded by 7th Street, 8th Street, Maple Avenue, and Wall Street. (AR 748, 791.)

The City's Approval of the Project:

On May 22, 2017, the City issue a notice of preparation for the Project. On September 20, 2018, the City released a 600-page Draft EIR (DEIR) for the Project. (AR 4086-4087, 1321.) The City issued the Final EIR³ on April 12, 2019. (AR 4087.) The City conducted a public hearing on the EIR in May 2019. (AR 5-156, 4410-11.) Thereafter, on June 3, 2019, the City's Advisory Agency, certified the EIR, adopted the CEQA findings and a mitigation, monitoring and reporting program (MMRP), and approved the Project.⁴ (AR 5-156, 4410-11.)

Two entities appealed the Advisory Agency's decision on June 13, 2019.⁵ (AR 6715, 6869.) The appeals raised concerns about the Project's construction noise and air quality impacts. (AR 3574-77, 6869-80.) The City Planning Commission (CPC) heard and denied the appeals on August 26, 2019. The CPC certified the EIR and affirmed the Advisory Agency's Project approval. (AR 157-312, 4412-4420, 4425-4427, 4429-4531.)

On September 5, 2019, Petitioner appealed the CPC's decision. (AR 8457-8464.) On October 29, 2019, after holding another public hearing, the City's Planning and Land Use Management Committee voted unanimously to recommend that the full City Council deny the appeals and approve the Project. (AR 440-445, 4543-4547, 4548- 4602.) At a public meeting on November 12, 2019, the City Council voted unanimously to deny the appeals and approve the Project. (AR 709-710, 4603-4623.)

The writ petition ensued.

STANDARD OF REVIEW

In reviewing an agency's compliance with CEQA during the course of its legislative or quasi-legislative actions, the trial court's inquiry during a mandamus proceeding " 'shall extend only to whether there was a prejudicial abuse of discretion,' " which is established " 'if the agency has not proceeded in a manner required by law or if the determination or decision is not supported by substantial evidence.' " (*Vineyard Area Citizens for Responsible Growth Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 426 [citing Pub. Resources Code § 21168.5].) "In evaluating an EIR for CEQA compliance, . . . a reviewing court must adjust its scrutiny to the nature of the alleged defect, depending on whether the claim is predominantly one of improper procedure or a dispute over the facts." (*Id.* at 435.)

³ The court refers to the Final EIR herein as the EIR. The court designates any specific references to the Draft EIR as DEIR herein.

⁴ The Advisory Agency also approved the tract map on June 3, 2019. (AR 4299.) The City issued three errata to the EIR during the administrative review process: Erratum No. 1 on July 26, 2019; Erratum No. 2 on August 7, 2019; and Erratum No. 3 on October 18, 2019. (AR 4326.)

⁵ American Florists Exchange, Ltd. and the Coalition for Responsible Equitable Economic Development appealed the Advisory Agency's decision.

CEQA requires an EIR to “be prepared with a sufficient degree of analysis to provide decision makers with information which enables them to make a decision which intelligently takes account of environmental consequences.” (Guidelines⁶ § 15151; *Sierra Club v. County of Fresno (Friant Ranch)* (2018) 6 Cal.5th 502, 516.) “An EIR’s designation of a particular environmental effect as ‘significant’ does not excuse the EIR’s failure to reasonably describe the nature and magnitude of the adverse effect.” (*Id.* at 514.) “[T]here must be a disclosure of the ‘analytic route the . . . agency traveled from evidence to action.’ ” (*Laurel Heights Improvement Assn. v. Regents of the University of California* (1988) 47 Cal.3d 376, 404.) “[A] conclusory discussion of an environmental impact that an EIR deems significant can be determined by a court to be inadequate as an informational document without reference to substantial evidence.” (*Friant Ranch, supra*, 6 Cal.5th at 514.) If the deficiencies in an EIR preclude “informed decisionmaking and public participation, the goals of CEQA are thwarted and a prejudicial abuse of discretion has occurred.” (*Save Our Peninsula Committee v. Monterey County Bd. of Supervisors* (2001) 87 Cal.App.4th 99, 128.)

“Where the alleged defect is that the agency has failed to proceed in the manner required by law, the court determines de novo whether the agency has employed the correct procedures, scrupulously enforcing all legislatively mandated requirements.” (*Chico Advocates for a Responsible Economy v. City of Chico* (2019) 40 Cal.App.5th 839, 845.)

With respect to “all substantial evidence challenges, an appellant challenging an EIR for insufficient evidence must lay out the evidence favorable to the other side and show why it is lacking. Failure to do so is fatal. A reviewing court will not independently review the record to make up for appellant’s failure to carry his burden.” (*Defend the Bay v. City of Irvine* (2004) 119 Cal.App.4th 1261, 1266.) Moreover, “the reviewing court ‘may not set aside an agency’s approval of an EIR on the ground that an opposite conclusion would have been equally or more reasonable,’ for, on factual questions, our task ‘is not to weigh conflicting evidence and determine who has the better argument.’ ” (*Vineyard Area Citizens for Responsible Growth Inc. v. City of Rancho Cordova, supra*, 40 Cal.4th at 435.)

“Regardless of what is alleged, an EIR approved by a governmental agency is presumed legally adequate, and the party challenging the EIR has the burden of showing otherwise.” (*Chico Advocates for a Responsible Economy v. City of Chico, supra*, 40 Cal.App.5th at 846.)

⁶ The CEQA Guidelines are found at Title 14 Cal. Code Regs §§ 15000 et seq.

ANALYSIS

Petitioner contends the EIR analysis of the Project's environmental impacts is flawed as to greenhouse gas (GHG) emissions, air quality and noise. The court addresses the claims in turn.

GHG Impacts:

Petitioner claims the City's analysis under the "first significance threshold"⁷ does not comply with CEQA. Petitioner's arguments arise in three general categories that are all related in some way to the City's selection of a significance threshold for GHG impacts. First, Petitioner contends the EIR's GHG analysis is inaccurate, confusing and misleading. Second, Petitioner asserts the City selected an inappropriate significance threshold. Third, Petitioner argues the EIR fails as an informal document for decisionmakers and informed public participation because it omits any analysis of Senate Bill (SB) 32 codified at Health and Safety Code section 38566.

Guidelines section 15064.4, subdivision (a) provides: "A lead agency shall have discretion to determine, in the context of a particular project, whether to: (1) Quantify greenhouse gas emissions resulting from a project; and/or (2) Rely on a qualitative analysis or performance based standards." Thus, under the Guidelines, the City had the option of selecting a quantitative or qualitative significance threshold for GHG emissions "based to the extent possible on scientific and factual data." (Guidelines § 15064, subd. (b).)

Further, "California's CEQA Guidelines . . . recognize that an agency's adoption of a threshold of significance requires an exercise of reasoned judgment." (*Mission Bay Alliance v. Office of Community Investment & Infrastructure* (2016) 6 Cal.App.5th 160, 206.) A city's choice of a significance threshold "will be upheld if founded on substantial evidence." (*Ibid.*)

First, Petitioner argues the City's "discussion of the GHG significance thresholds violates CEQA" because "it is inaccurate and confusing." (Reply 5:33 [emphasis added].) The court disagrees. A reasonable reading of the EIR and the City's selection of a significance threshold does not support Petitioner's claim.

The City explained because the California Air Resources Board (CARB), the South Coast Air Quality Management District (SCAQMD) and the City "have yet to adopt project-level significance thresholds for GHG emissions that would be applicable to the Project," the City obtained its primary direction for GHG emissions analysis from the Guidelines. (AR 917.) The City reported a project could have a significant environmental impact if the project generated GHG emissions that may have a significant impact on the environment, or if the project would conflict with "an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions" of GHG. (AR 14:917.) After a straight-forward plain language discussion in plain in

⁷ Petitioner contends the City has relied upon two significance thresholds for GHG emissions. As discussed herein, the court disagrees. The EIR provides a single threshold of significance for GHG emissions.

the EIR concerning the selection of significance thresholds, the City reported “the Project would not have a significant effect on the environment if it is found to be consistent with the applicable regulatory plans and policies to reduce GHG emissions.” (AR 920.)

The City thereafter set forth the applicable plans and policies for which it considered consistency in the context of GHG emissions. (AR 14:920.) The EIR methodically discusses the Project and the applicable plans and policies. Petitioner has not demonstrated the EIR’s significance threshold discussion would mislead or confuse decisionmakers or public participants.

Second, without expressly so stating, much of Petitioner’s argument related to GHG emissions theorizes the City abused its discretion in deciding not to use a *quantitative* threshold of significance for the Project. Petitioner contends the SCAQMD quantitative thresholds of significance should have been used for the Project as they are “the most appropriate . . . to apply because the Project is a mixed-use project.” (Opening Brief 14:17-18.)

Petitioner thus contends the City engaged in “threshold shopping” for the Project. Petitioner speculates the City uses the SCAQMD’s recommended thresholds of significance “to analyze projects where emissions are below the threshold.” (Opening Brief 14:32-35.) Petitioner cites three such projects in the City’s downtown area where the City used SCAQMD’s thresholds of significance to find a project’s GHG emissions had less than significant impacts. (AR 6495-6496.)

The City explained it elected not to rely on SCAQMD’s 2008 draft guidance (as revised in 2010) because neither the City nor SCAQMD “has adopted numeric thresholds for greenhouse gas emissions for land use development projects (e.g., residential/commercial projects) such as the Project.” (AR 2820.) The City elaborated:

As further explained in the Draft EIR, in 2008, the SCAQMD convened a GHG CEQA Significance Threshold Working Group to provide guidance to local lead agencies on determining significance for GHG emissions in their CEQA documents. In December 2008, the SCAQMD Governing Board adopted interim GHG significance thresholds for projects where the SCAQMD is the lead agency. That threshold uses a tiered approach to determine a project’s significance, with 10,000 metric tons of CO₂ equivalent (MTCO_{2e}) per year as a screening numerical threshold for stationary sources. In September 2010, the Working Group released additional revisions that recommended a screening threshold of 3,500 MTCO_{2e} for residential projects, 1,400 MTCO_{2e} for commercial projects, and 3,000 MTCO_{2e} for mixed use projects. The SCAQMD has not since adopted those thresholds, nor has the SCAQMD provided a timeline for formal consideration of those thresholds. In the meantime, the thresholds in the SCAQMD’s guidance document are used as a non-binding guide. A lead agency is not required under CEQA to rely on draft regulatory standards that have not been adopted as significance thresholds. (AR 2820-2821.)

While the City may have chosen to use the SCAQMD's guidance as thresholds of significance (as it apparently has done with at least three other projects) in the past, the City was not required to do so. (Guidelines § 15064.7, subd. (c). See also Guidelines § 15064.4, subd. (b)(3).) The Guidelines do "not mandate the use of absolute numerical thresholds to measure the significance of greenhouse gas emissions." (*Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal.4th 204, 221.) Accordingly, Petitioner has not met its burden of demonstrating the City's selection of the significance threshold is not supported by substantial evidence.

Third, Petitioner contends the EIR's GHG emissions analysis is inconsistent with SB 32. That is, Petitioner attacks the City's finding the Project is "consisten[t] with the policies in SB 32 and Executive Order B-30-15, which includes the GHG reduction goals codified in SB 32." (Opposition Brief 17:2-3.) Petitioner contends "[t]he EIR includes compliance with Executive Order B-30-15 on the list of measures it must comply with for the Project's GHG emissions to be considered insignificant . . . and the Project does not comply with that executive order." (Reply 8:22-25.) Petitioner is correct to the extent there is no substantial evidence to support the City's position on Executive Order (EO) B-30-15.

As an initial matter, the City and Flower Growers argue Petitioner failed to exhaust its administrative remedies on the issue of "CARB's 2017 Scoping Plan, which provides strategies to achieve the 2040 GHG emission goals set in SB 32." (Opposition Brief 17:12-14.) The court disagrees. The broader issue of overall compliance with SB 32—however that might be achieved—was squarely presented to the City during the administrative proceedings.

SWAPE⁸ specifically raised the issue of SB 32 in its written comments to the DEIR. (AR 2900, 2922.) SWAPE wrote:

AB 32 requires California to reduce GHG emissions to 1990 levels by 2020. However, in September 2016, prior to the release of the IS/MND, Governor Brown signed Senate Bill 32, enacting Health and Safety Code § 38566. [] This statute ("SB 32") requires California to achieve a new, more aggressive 40% reduction in GHG emissions over the 1990 levels by 2030. 'This 40 percent reduction is widely acknowledged as a necessary interim target to ensure that California meets its longer-range goal of reducing greenhouse gas emissions to 80 percent below 1990 levels by the year 2050.' Therefore, by failing to demonstrate consistency with the reduction targets set forth by SB 32, the Project may conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions. As a result, the Project may have a potentially significant impact that was not previously addressed in the DEIR, and as such, a revised EIR should be prepared. (AR 2922.)

⁸ SWAPE is an acronym for Soil Water Air Protection Enterprises. SWAPE provides technical consultation, data analysis, and litigation support for the environment. (AR 2927.)

SWAPE also advised the City—with expert opinion—“to reach the statewide goal of 259 MTCO₂e, California would have to reduce its emissions by 49 percent below the ‘business-as-usual’ levels. This reduction target indicates that compliance with these more aggressive reduction goals, beyond what is mandated by AB 32, will be necessary.” (AR 2923.)

As acknowledged by the City and Flower Growers, the legislature codified EO B-30-15 at SB 32. (Opposition Brief 17:3.) Executed by Governor Brown on April 29, 2015, two years before the notice of preparation, EO B-30-15 provides in part:

“A new interim statewide greenhouse emission reduction target to reduce greenhouse gas emissions to 40 percent below 1990 levels by 2030 is established in order to ensure California meets its target of reducing greenhouse gas emissions to 80 percent below 1990 levels by 2050.”

SB 32, codified at Health and Safety Code section 38566, effective January 1, 2017 (prior to the City’s notice of preparation) provides:

“In adopting rules and regulations to achieve the maximum technologically feasible and cost-effective greenhouse gas emissions reductions authorized by this division, the state board shall ensure that statewide greenhouse gas emissions are reduced to at least 40 percent below the statewide greenhouse gas emissions limit no later than December 31, 2030.”

The EIR reports the Project’s GHG emissions are “consistent”⁹ with EO B-30-15. (AR 926.) The EIR’s discussion of EO B-30-15 in its “Consistency Analysis” reports the order’s target of reducing GHG emissions to 40 percent below 1990 levels by 2030. (AR 926-927.) In fact, the EIR suggests the Project is actually consistent and compliant with EO B-30-15: “As such, given the reasonably anticipated decline in Project emissions once fully constructed and operational, the Project is consistent with the Executive Order’s horizon-year goal.”¹⁰ (AR 926.)

The issue raised by Petitioner is whether there is substantial evidence for the EIR’s claim to decisionmakers and public participants the Project does not conflict with EO B-30-15—“an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions” of GHG. (AR 14:917.) The City’s position of consistency with EO B-30-15 requires substantial evidence.

⁹ “Consistent” means “marked by harmony, regularity, or steady continuity” and “marked by agreement.” (www.merriam-webster.com/dictionary/consistent.)

¹⁰ The EIR’s use of a singular possessive form as opposed to a plural possessive form makes the analysis where the EIR discusses two executive orders unclear. In any event, the statement implies quantitative compliance with required GHG emission reductions by 2030. The City’s findings, however, make clear the City intended the statement to apply to both executive orders. (AR 235.)

Certainly, the EIR acknowledges a 2030 GHG emissions target exists under the law; in its Consistency Analysis, however, the EIR provides no information about that target or how the Project's GHG emissions are consistent with it. The EIR's claim "the Project's post-2020 emissions trajectory is expected to follow a declining trend, consistent with the 2030 and 2050 targets and Executive Order . . . B-30-15" appears to be unsupported by substantial evidence. (AR 927.)

Moreover, the EIR reports "[m]any of the emission reduction strategies recommended by CARB would serve to *reduce the Project's post-2020 emissions level to the extent applicable by law . . .*" (AR 927 [emphasis added].) The EIR, however, provides no analysis to support the claim the Project's GHG emissions comply with Health and Safety Code section 38566. That is, "applicable law."¹¹ In fact, the only evidence on the issue suggests otherwise. (AR 2923 [49 percent reduction required for compliance versus Project's 33 percent reduction].)

During argument the Flower Growers directed the court to evidence the City could have considered to find the Project is consistent with EO B-30-15. The evidence, however, is not substantial evidence supporting the claim the Project's post-2020 emissions will be reduced to the level required by EO B-30-15 as reported in the EIR.

For example, the EIR's discussion of EO B-30-15 explains "a statewide GHG reduction target of 40 percent below 1990 levels by 2030." (AR 902.) Citing a "recent study," the EIR reports "the state's existing and proposed regulatory framework will allow the state to reduce its GHG emissions level to 40 percent below 1990 levels by 2030 (consistent with Executive Order B-30-15), and to 60 percent below 1990 levels by 2050." (AR 903.) While the City cited the study by footnote, the study did not address the Project and its GHG emissions.¹² Thus, the discussion and study are not substantial evidence of the Project's compliance with EO B-30-15.

In addition, the Project's reduction in GHG emissions related to design features (AR 924-925) does not address compliance with EO B-30-15. The order sets forth a quantitative standard. The EIR's general reference to design features and GHG does not inform on consistency with that quantitative standard.

¹¹ The City found, "As such, the Project's post-2020 emissions trajectory is expected to follow a declining trend, *consistent with the 2030 and 2050 targets and Executive Order S-3-05 and B-30-15.*" (AR 235 [emphasis added].) The statement is misleading because it implies the Project meets EO B-30-15's emissions target when there is no substantial evidence to support the City's position.

¹² The court does not have access to the study cited in the footnote. The EIR's narrative suggests the study concerned "various combinations of policies" to assist emission levels to "remain very low through 2050 . . ." (AR 903.) In the unlikely event the general study addressed the Project, the court notes "a report 'buried in an appendix,' is not a substitute for 'a good faith reasoned analysis . . .'" (*Banning Ranch Conservancy v. City of Newport Beach* (2017) 2 Cal.5th 918, 941 [citation omitted].)

The EIR's discussion of the Regional Transportation Plan/Sustainable Communities Strategy of Southern California Association of Governments (SCAG) does address GHG emission reductions. (AR 911, 930-931.) The discussion, however, does not inform on the Project's consistency with EO B-30-15.

Finally, relying on *Cleveland National Forest Foundation v. San Diego Assn. of Governments* (2017) 3 Cal.5th 497, the City argues it had no obligation to consider EO B-30-15. In *Cleveland National Forest Foundation*, the petitioners argued the agency "should have evaluated the plan's impacts against an executive order signed" by the governor. (*Id.* at 503.) The Supreme Court disagreed. The agency in *Cleveland National Forest Foundation*, however, did not adopt a significance threshold of express consistency with an executive order as the City did here. (See *id.* at 507 [three measures of significance].) That is, the agency in *Cleveland National Forest Foundation* did not represent the project was consistent with a particular executive order and establish its significance threshold in part on such consistency.

Based on the foregoing, the court finds the EIR's claim of consistency with EO B-30-15 and the policies therein is not supported by substantial evidence. Thus, the EIR's conclusions that GHG emissions do not exceed the City's chosen significance threshold is unsupported. The City abused its discretion in finding GHG emissions would not have a substantial environmental impact. "[A] conclusory discussion of an environmental impact that an EIR deems significant can be determined by a court to be inadequate as an informational document without reference to substantial evidence." (*Friant Ranch, supra*, 6 Cal.5th at 514.) Petitioner is entitled to relief based on the EIR's incomplete discussion of GHG emission impacts.¹³

Air Quality Impacts:

The EIR reports the Project's construction emissions would cause significant regional and local air quality impacts based on nitrogen oxides (NOx) and fine particulate matter (PM2.5). (AR 843.) Thus, the Project required mitigation measures for air quality impacts. (AR 843.)

Petitioner contends the EIR fails to adequately analyze and mitigate construction-related impacts on air quality.

¹³ During argument, the parties argued about the meaning of Table 4.F-5. (AR 922.) The City contended the table calculations demonstrated compliance with EO B-30-15 while Petitioner argued it did not. The narrative accompanying the table indicates the Project is consistent with the 2014 Revised AB 32 Scoping Plan because of a reduction target of 15.3 percent. There is no discussion of EO B-30-15. Whether the table's information is consistent with EO B-3-15—and the court could not determine one way or the other even after the aid of argument—is unclear and does not inform decisionmakers or public participation.

1. Mitigation Measure (MM) C-1

MM C-1 requires “[a]ll off-road construction equipment greater than 50 horsepower” satisfy United States Environmental Protection Agency (EPA) “Tier 4 emissions standards to reduce NO_x and PM_{2.5} emissions at the Project Site.” (AR 849.) The EIR states “[a]ny emissions control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level 3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations.” (AR 849.)

“For projects for which an EIR has been prepared, where substantial evidence supports the approving agency’s conclusion that mitigation measures will be effective, courts will uphold such measures against attacks based on their alleged inadequacy.” (*Sacramento Old City Assn. v. City Council* (1991) 229 Cal.App.3d 1011, 1027.) A reviewing court, however, will not defer to the agency if there is no substantial evidence in the record showing the mitigation measure is feasible and effective, or if the feasibility or effectiveness of the mitigation measure “def[ies] common sense.” (*Gray v. County of Madera* (2008) 167 Cal.App.4th 1099, 1116-1117.)

Petitioner contends MM C-1 is both ineffective and infeasible.

The parties’ argument here centers on the meaning of Tier 4 standards for the construction equipment to be used for the Project. Petitioner contends there are two Tier 4 standards—an interim standard and a final standard.¹⁴ Petitioner reports the CalEEMod calculations are based on a Tier 4 final standard—an assumption all construction equipment used for the Project with a horsepower greater than 50 comply Tier 4 final standards. (AR 2908 [citing Appendix E-1]; see also AR 1475-1478, 1507-1510, 1544-1547.) Therefore, to the extent MM C-1 permits the Flower Growers to use equipment with a Tier 4 interim standard, the required mitigation will not be achieved. That is, the CalEEMod calculation on which the effectiveness of MM C-1 is based assumes a Tier 4 final standard for all construction equipment exceeding 50 horsepower. MM C-1, however, does not require all equipment to be Tier 4 final compliant.

The City dismisses Petitioner’s claim as nothing more than a “red herring.” (Opposition 21:18.) The City reasons Tier 4 “interim” standards were only in effect for a short period of time for certain manufacturers. The interim period ended in 2018 well before the City issued the EIR in 2019. (AR 2803, 4303-4304.) The EIR explains:

“Tier 4 engines have been phased in nationwide since 2008 for all engine types. While some manufacturers were given limited flexibility to phase in compliant engines under the Transition Program for Equipment Manufacturers (TPEM), this provided up

¹⁴ There seems to be no dispute Tier 4 final standards are more stringent (allow less emissions) than Tier 4 interim standards. (AR 2909, 2803.)

to seven years of additional time to offer such equipment. For engines less than 56 horsepower (hp), this TPEM period ended at the end of 2014. Engines between 56-130 hp had until the end of 2018, while larger engines of 130 hp or more ended at the end of 2017. As a result, Tier 4 equipment is commercially available from all manufacturers, *especially for common types of equipment to be used during the construction phases for this Project.*" (AR 2803 [emphasis added].)

The City sidesteps and avoids the issue. (See AR 6621-6622.) MM C-1 relies on Tier 4 equipment. CalEEMod calculations—demonstrating effective mitigation—are based on Tier 4 final standards for construction equipment exceeding 50 horsepower. The City does not require, however, that all equipment exceeding 50 horsepower used for construction have been manufactured in 2019 and later—that is, when Tier 4 final standards were required. Thus, MM C-1 permits, for example, construction equipment with 130 horsepower manufactured in 2018 under the Tier 4 interim standard to be used on the Project. To the extent the City permits such equipment to be used, it would be inconsistent with CalEEMod calculations and undermine the mitigation.

During argument, the City suggested its interpretation of MM C-1 requires equipment for the Project to use Tier 4 final standards. The City contends its CalEEMod calculations support its intent. That is, if the City did not intend for all equipment to meet such standards it would not have used such a setting in its CalEEMod calculations.¹⁵ The City also noted the Flower Growers concede MM C-1 requires Tier 4 final standard engines and so advised the City: "It should be noted that the measure refers to the use of Tier 4-certified engines, not the less effective Tier 4-interim certified engines." (AR 10136.)

The MMRP will require compliance with Tier 4 final standards for MM C-1. Whether the Project is complying with MM C-1 will not turn on the good faith of an "on-the-hood-of-a-truck" analysis of the mitigation measure by a contractor, as suggested by Petitioner during argument. Instead, the MMRP requires:

"[S]pecifically during the construction phase and prior to the issuance of building permits, the [Flower Growers] shall retain an independent Construction Monitor (either via the City or through a third-party consultant), approved by the City of

¹⁵ Additionally, the City differentiated between Tier 4 standards (which the City considers final standards) and Transition Program for Equipment Manufacturers (TPEM) standards in the EIR. Thus, the City's language in MM C-1 would not support two Tier 4 standards, final and interim. Under the City's view, there is a Tier 4 standard and a TPEM standard. If the City had intended to include an "interim" Tier 4 standard in the MM, it would have used TPEM. In any event, this distinction provides additional support to the City's intent and the enforceable performance standard used for the MM.

Los Angeles Department of City Planning, who shall be responsible for monitoring implementation of Project design features and mitigation measures during construction activities consistent with the monitoring phase and frequency set forth in this [MMRP].” (AR 143.)

Thus, while MM C-1 could have been more precise, the City’s intent is clear, and the MM contains a specific performance standard. Moreover, the Flower Growers have acknowledged MM C-1 requires construction equipment with Tier 4 final standards (or its equivalent) be used for the Project. The MMRP will “ensure compliance during project implementation.” (Pub. Resources Code § 21081.6, subd. (a).)

While Petitioner contends the City uses a performance standard addressing only particulate but not NOx emissions (Opening Brief 18:14-19), the court is unpersuaded. MM C-1 requires any construction equipment meet both standards—Tier 4 final and a Level 3 diesel emission control strategy. (AR 849 [“In addition”].)

Based on the foregoing, the court finds the City’s determination MM C-1 will be effective at mitigating air quality impacts to a less-than-significant level during construction is supported by substantial evidence.

a. Feasibility and Enforceability of MM C-1

According to Petitioner, MM C-1 “does not provide either feasible or enforceable means to ensure significant air quality impacts will be avoided.” (Opening Brief 19:5-6.) Petitioner argues MM C-1 is inadequate to ensure avoidance of significant impacts to the air quality “because of practical obstacles in obtaining the required technology.” (Opening Brief 19:10-11.)

Petitioner reports while Tier 4 standards have been phased in for construction equipment manufactured since 2008 (Tier 4 Interim) and 2014 (Tier 4 Final), “a large portion of the construction equipment currently in use was manufactured to lower standards.” (Opening Brief 19:16-17 [citing AR 2910-2911].)¹⁶ Petitioner contends the City’s claim Tier 4 standards construction equipment is readily available is unsupported by substantial evidence. Thus, Petitioner claims the EIR’s conclusion supporting feasibility—the availability of equipment—fails.

Petitioner’s argument alleging a lack of appropriate construction equipment is based on speculation. Petitioner’s reliance on a seven-year-old report from 2014—just after Tier 4 final

¹⁶ “In 2014, 25% of all offroad equipment in the state of California were equipped with Tier 2 engines, approximately 12% were equipped with Tier 3 engines, approximately 18% were equipped with Tier 4 Interim engines, and only 4% were equipped with Tier 4 Final engines.”

standards phased in—does not meet Petitioner’s burden on the issue. The City’s position “it is reasonable to conclude that the market has produced many more Tier 4-compliant engines” since 2014 is reasonable and appropriate given Petitioner’s speculation. (Opposition 23:2-3.) This is especially true given the passage of time and such equipment being available from all manufacturers. (AR 2806.)

More importantly, if Flower Growers cannot secure specific Tier 4 equipment as required by MM C-1, Flower Growers will be required to “work with the City’s Building and Safety Department on equivalent alternatives that minimize tailpipe emissions from off-road equipment.” (AR 2803.) The term “equivalent” means the Flower Growers must demonstrate the proffered alternative “meets or exceeds” Tier 4 standards thereby meeting necessary emission reductions in NOx and PM2.5. (AR 4303-4304.)

Based on the speculative nature of Petitioner’s claim concerning feasibility, the court finds Petitioner did not meet its burden of demonstrating the City abused its discretion when it found MM C-1 is feasible.¹⁷

2. Air Quality Impacts to Sensitive Receptors

Petitioner takes issue with the City’s selection and identification of sensitive receptors and their proximity to the Project. The flaw, according to Petitioner, undermines the EIR’s air quality analysis.

Petitioner notes the EIR identifies the “nearest” sensitive receptors at distances of 220 (school), 240 (apartment building), 440 (apartment building) and 700 (apartment building) feet from the Project. (AR 836.) Petitioner reports there is an apartment building within 55 feet of the Project and another closer than 240 feet. (AR 778, 3173, 6874-6875.) Petitioner argues that these omissions are misleading by creating the impression for decisionmakers and the participating public there are few sensitive uses in close proximity to the Project.¹⁸

To the extent selection of a group of sensitive receptors is a methodology issue, the City is entitled to deference on its methodology.¹⁹ Thus, the decision is subject to substantial evidence review. (*City of Long Beach v. Los Angeles Unified School Dist.* (2009) 176 Cal.App.4th 889, 898.)

¹⁷ The court’s finding MM C-1 is effective sufficiently responds to Petitioner’s claim concerning enforceability.

¹⁸ Additionally, Petitioner argues the EIR’s air quality impacts on sensitive receptors is inadequate because it relies on the MM C-1 to render the impact less than significant. Of course, the court’s earlier analysis of MM C-1 would be equally applicable here.

¹⁹ That said, the court is not persuaded the issue is, in fact, a methodology issue.

The City's use of SCAQMD guidance on the issue does not actually support selection issues. That is, nothing in the SCAQMD guidance instructs on selection of sensitive receptors over others. (AR 832-848, 845.) Thus, the SCAQMD guidance is not substantial evidence.

In the EIR, the City "disclose[d] the location of a number of representative sensitive receptors near the Project Site" including residential and non-residential uses. (AR 7232.) The City's response to public comment is instructive:

"Almost all of the other residential uses identified by the commentor are at the same distance from the Project site as the Santee Court Apartments (i.e., the Santee Village Apartments) or even a further distance away from the Project site (i.e., the Garment Lofts are 40 feet further away than the Santee Court Apartments and the Santee Village Lofts are 60 feet further away than the Santee Court Apartments). Moreover, compliance with SCAQMD's thresholds of significance will avoid any significant impact to any of these sensitive receptors and the EIR demonstrates that mitigated construction emissions would be less than all the SCAQMD's thresholds of significance. (Refer to Draft EIR, pages 4.C-19 through 23.) This conclusion would apply regardless of the location of any receptor pursuant to SCAQMD guidance." (AR 7232; see also AR 3570-3571.)

The court finds Petitioner has not met its burden of demonstrating a prejudicial abuse of discretion even assuming the City abused its discretion in its selection of sensitive receptors. Petitioner has not suggested any legal requirement that every sensitive receptor within close proximity of a Project must be identified. "CEQA requires only that the agency 'use its best efforts to find out and disclose all that it reasonably can' (Guidelines, § 15144), and that the EIR display 'adequacy, completeness, and a good faith effort at full disclosure' (Guidelines, § 15151)." (*Planning & Conservation League v. Castaic Lake Water Agency* (2009) 180 Cal.App.4th 210, 253.)

Further, Petitioner fails to demonstrate the City sampling is misleading—other than to the extent the City did not include every single sensitive receptor in close proximity to the Project. The City's expert concluded the Project would avoid significant impacts to all receptors in the vicinity because the Project's mitigated construction emissions will fall below SCAQMD's thresholds measured at the source of the emissions. (AR 3570-3571, 4068, 7232.) Petitioner does not suggest with evidence the EIR's analysis and conclusions would be different with respect to the omitted sensitive receptors as opposed to the receptors the City considered and analyzed. Accordingly, Petitioner shows no prejudicial abuse of discretion.

3. Disclosure of Health Risks Associated with Air Quality Impacts

Petitioner argues the Project fails to adequately discuss the connections between potential pollutant emissions and resulting human health impacts. Such analysis, Petitioner contends, is required by Guidelines section 15126.2, subdivision (a).

Petitioner asserts the EIR failed to discuss the health risks related to the estimated level of construction and operational emissions. (AR 827-850.) The EIR therefore does not comply with the Supreme Court's direction in *Friant Ranch* that a "[p]roject's health effects must be "clearly identified" and the discussion must include "relevant specifics" about the environmental changes attributable to the Project and their associated health outcomes." (*Friant Ranch, supra*, 6 Cal.5th at 518.)

Further, Petitioner argues the City's 2019 Health Risk Assessment (HRA) does not "fill the gap in the EIR's analysis." (Opening Brief 23:28.) The HRA contains no analysis of operational emissions and merely addresses construction-related emissions of diesel particulate matter. (AR 846.)

Under SCAQMD guidance, an HRA is recommended for "substantial sources of diesel particulate emissions (e.g., truck stops and warehouse distribution facilities)" (AR 846.) The City determined—and there is no challenge to the City's finding—the "Project would not result in any substantial emissions of toxic air contaminants (TAC) during the construction or operations phase." (AR 846.)

The EIR explains:

"The Project would not result in any substantial emissions of toxic air contaminants (TACs) during the construction or operations phase. During the construction phase, the primary air quality impacts would be associated with the combustion of diesel fuels, which produce exhaust-related particulate matter that is considered a toxic air contaminant by CARB based on chronic exposure to these emissions. However, construction activities would not produce chronic, long-term exposure to diesel particulate matter. During long-term project operations, the Project does not include typical sources of acutely and chronically hazardous TACs such as industrial manufacturing processes and automotive repair facilities. As a result, the Project would not create substantial concentrations of TACs. In addition, the SCAQMD recommends that health risk assessments be conducted for substantial sources of diesel particulate emissions (e.g., truck stops and warehouse distribution facilities) and has provided guidance for analyzing mobile source diesel emissions. The Project would not generate a substantial number of truck trips. Based on the limited activity of TAC sources, the Project would not

warrant the need for a health risk assessment associated with on-site activities. Therefore, Project impacts related to TACs would be less than significant.” (AR 846; see also AR 2964-66.)

Contrary to Petitioner’s position, *Friant Ranch*, does not require more from the City. The Project does not exceed any SCAQMD significance threshold for air quality impacts or trigger any criteria requiring an HRA.

Petitioner has not met its burden of demonstrating a prejudicial abuse of discretion based on a failure to adequately discuss the connections between potential pollutant emissions and resulting human health impacts.²⁰

Noise Impacts:

Petitioner contends the EIR fails to adequately analyze and mitigate construction-related environmental impacts as to noise.

1. Disclosure of Impacts to Sensitive Receptors

Petitioner takes issue with the EIR’s purported failure to analyze the construction-noise impacts at the Textile Building Lofts, a location merely 55 feet from the Project. The EIR does not contain any noise analysis to any sensitive receptors at this location. In fact, the first discussion by the City about the noise impacts to the Textile Building Lofts is contained in Erratum No. 3. (AR 3173, 3342-3343.)

Petitioner contends the City’s analysis is flawed. Petitioner believes the daytime ambient noise level of 64.8 dBA, based on measurements on Maple Avenue, is overstated for the Textile Building Lofts. (AR 3343.) The City’s inaccurate 64.8 dBA daytime noise level assumption, according to Petitioner, led to a conclusion of only a 1.3 dBA daytime noise level increase such that the Project’s construction-noise impacts did not exceed the 5 dBA level noise increase significance threshold. (AR 3343.)

Based on expert opinion, however, Petitioner reports the City’s ambient noise level determination failed to take into account the 12-story height of the Textile Building Lofts. Higher stories have lower ambient noise levels. (AR 10085-10086 [identifying ambient noise is as low as 58.5 for the twelfth floor].) The daytime ambient noise levels are not the same “for all floors of the Textile Building [Lofts] because the higher floors are farther from the road traffic than lower floors.” (AR 10085.) Thus, the City’s conclusion construction-noise related impacts

²⁰ Petitioner appears to have abandoned the argument in reply.

to the Textile Building Lofts is flawed—it is based on an “unsupported assumption about existing ambient noise levels.” (Opening Brief 25:15-16.)

The City’s expert does not address the ambient daytime noise level for the higher floors of the Textile Building Lofts. The City’s expert did consider the building, however, using the same methodology used in the DEIR. (AR 4305.) The City’s expert determined the Textile Building Lofts would experience an increase in noise based on construction of 1.3 dBA (or less). (AR 3173-74, 7229.)

Further, Project construction-related noise impacts are expected to remain below the City’s 5 dBA significance threshold. (AR 3343, 7229.) In a June 19, 2019 memorandum, the City’s noise expert explained:

“[T]his [Maple Street for the Textile Building Lofts] baseline noise level is far greater than the 50.8 dBA L_{eq} noise level used to represent baseline conditions at the Santee Court Apartments receptor. Utilizing the same construction source and mitigation assumptions that were used for the Santee Court Apartments analysis, as Textile Building Lofts would benefit from the same mitigation measures intended to reduce construction noise impacts at Santee Court Apartments, Textile Building Lofts would be projected to experience a construction-related noise increase of just 1.3 dBA L_{eq} , similar to but less than the 1.6 dBA L_{eq} impact that would occur at Santee Court Apartments. The noise impact at Textile Building Lofts would not exceed the 5 dBA noise increase threshold; in fact, it would not exceed the 3 dBA L_{eq} threshold of perceptibility that represents when noise conditions may be noticeably louder.” (AR 7229.)

While Petitioner relies expert opinion to dispute and contradict the City’s expert technical report, Petitioner has not demonstrated the City’s expert studies are so “clearly inadequate or unsupported” as to be “entitled to no judicial deference.” (See *Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal.3d 376, 409 fn. 12. [“A clearly inadequate or unsupported study is entitled to no judicial deference.”]) “When an agency is faced with conflicting evidence on an issue, it is permitted to give more weight to some of the evidence and to favor the opinions of some experts over others. (*Association of Irrigated Residents v. County of Madera* (2003) 107 Cal.App.4th 1383, 1397.)

Accordingly, Petitioner failed to meet its burden of demonstrating a prejudicial abuse of discretion related to the City’s analysis of construction-related noise impacts. (See *State Water Resources Control Bd. Cases* (2006) 136 Cal.App.4th 674, 795. [“The party challenging the EIR, however, bears the burden of demonstrating that the studies on which the EIR is based ‘are clearly inadequate or unsupported.’”])

2. Feasibility and Effectiveness of MM I-1 and I-2

Petitioner argues MM I-1 and I-2 are vague, ineffective and unenforceable.

a. MM I-1

“To ensure that the Project’s construction-related noise levels do not exceed 75 dBA and that construction-related noise increases at Santee Court Apartments do not exceed 5 dBA,” the City adopted MM I-1. MM I-1 provides “[a]ll capable diesel-powered construction vehicles shall be equipped with exhaust mufflers or other suitable noise reduction devices.” (AR 1011.)

Petitioner contends MM I-1 does not establish a performance standard because nothing in the mitigation measure sets a required noise level reduction. Petitioner argues muffler use alone does not ensure MM I-1 will achieve any particular level of mitigation. Petitioner asserts “the fact that exhaust mufflers should or could reduce equipment noise by 3 dBA or more doesn’t address the fact that the measure, as written, does not require mitigation at that level and therefore does not ensure that level of mitigation will be achieved, as is necessary to support the finding of no significant impacts from construction noise.” (Opening Brief 28:18-22.)

As noted earlier, “For projects for which an EIR has been prepared, where substantial evidence supports the approving agency’s conclusion that mitigation measures will be effective, courts will uphold such measures against attacks based on their alleged inadequacy.” (*Sacramento Old City Assn. v. City Council*, *supra*, 229 Cal.App.3d at 1027.)

The City contends MM I-1 as written will be effective. The use of mufflers to abate noise impacts is considered “best practices” and recommended under the City’s CEQA threshold guide. (AR 2773, 2786-2787, 7299, 10131-10132 [EPA’s Office of Noise Abatement and Control Study], 10139.)²¹ In addition, the City’s noise expert confirmed the use of mufflers as required by MM I-1 would achieve a 3 dBA noise reduction. (AR 3085-3086, 10139-10140.) The expert explained “aftermarket mufflers reduce noise by over 3 dBA. (AR 10139.) In addition, the Project’s MMRP requires the Flower Growers to retain an independent Construction Monitor, approved by the City, responsible for: (a) ensuring that “capable” mufflers are used during construction; and (b) documenting compliance. (AR 2848-2849.)

While the court agrees MM I-1 does not contain a specific performance standard, it does mandate the use of certain equipment that does have performance standards. Substantial evidence supports the City’s conclusion the use of mufflers will be effective at reducing noise levels by at least 3 dBA. The City’s noise expert reviewed aftermarket muffler manufacturer

²¹ The EPA study, upon which the City’s CEQA Threshold Guide relies, shows that “equipment mufflers should reduce excavation and grading phase noise levels by 3 dBA. (AR 10131.)

Subject: Written Comments - Travertine Project - August 6, 2024 agenda

Hello,

I am writing with my comments with respect to the proposed Travertine project (item 2 under "Public Hearings" on the August 6, 2024 meeting agenda).

I am a resident of the neighboring Trilogy development, and am opposed to the creation of an elevated roadway on Avenue 62 to access the Travertine development (the elevation being necessary because of a high berm that the road would need to cross). I understand that the road would have to rise to 36 feet in order to clear the 30-foot berm without touching it. To do this, the rise would have to start 600 feet before the berm. I also understand that over 6000 cars are expected to cross the berm daily.

An elevated roadway would have a significant impact on Trilogy residents in terms of noise, air pollution, light and aesthetics.

I think the better and more logical solution is to extend the south end of Jefferson Street to provide access to Travertine. This would be more convenient for the eventual residents of Travertine as well as having minimal, if any, impact on the residents of Trilogy.

Thank you for your consideration.

Bravo!

On Sun, Aug 4, 2024 at 10:03 AM John K. Miller <jkmillergroup@gmail.com> wrote:

Dear Madam Mayor and Council Members,

I am John Miller, and I own [81455 Golden Poppy Way](#) in Trilogy La Quinta. I have lived in La Quinta for over 24 years and am happy to call it my home. As a Realtor, I have represented over 1,300 clients over the past 21 years, most of whom chose Trilogy La Quinta for its remote, peaceful, and tranquil location backing up to the Santa Rosa Mountains.

I am writing to express my strong opposition to the proposed 1200-home Travertine development, particularly the planned primary arterial access routed through Avenue 62. As a resident and community advocate, I have several significant concerns about this development's adverse impacts on our area.

Firstly, the proposed bridge over the existing dike on Avenue 62 to facilitate access to Travertine will dramatically increase noise and traffic throughout our community. This surge in traffic will result in higher emissions and greenhouse gases, which is counterproductive to our collective efforts to reduce our environmental footprint and combat climate change. The influx of vehicles will contribute to air pollution, negatively impacting the health and well-being of current residents.

Moreover, the noise generated by the increased traffic, mainly from vehicles crossing the newly constructed bridge, will disrupt the tranquility of our neighborhood. The residents of Trilogy La Quinta chose this community for its peaceful environment, and introducing this development will undermine the quality of life we currently enjoy. The constant noise pollution will be a source of stress and discomfort for many residents, especially those closest to Avenue 62.

Another critical concern is the potential impact on the local wildlife, specifically the Bighorn sheep that inhabit this region. The construction and increased human activity will likely disturb their natural habitat, threatening survival. Protecting our local wildlife is essential, and the proposed development poses a significant risk to these animals.

Additionally, the infrastructure in our area may need to be equipped to handle the substantial increase in traffic and population density. The strain on local roads, public services, and amenities could lead to congestion and reduced service quality, further diminishing the living standards for

current and future residents.

In conclusion, I strongly urge the city council to reconsider the access plan for the Travertine development. Routing the main arterial through Avenue 62 is not sustainable or community-friendly. I recommend exploring alternative access points that will minimize the environmental impact, preserve the peace of existing neighborhoods, and protect our local wildlife.

Thank you for your attention to this matter. I trust that the city council will take these concerns seriously and decide to prioritize the well-being of current residents and the environment.

Sincerely,

John K Miller

Please see the attached letter of support for Travertine.

Thank you.

August 6, 2024

Dear City of La Quinta Planning Commission and Staff,

Sunrise Company supports the Travertine development in La Quinta. Sunrise Company has been developing master-planned communities in the Desert for over 60 years. We are currently developing Andalusia Country Club in La Quinta and Toscana Country Club in Indian Wells.

We are not speaking on behalf of individual Andalusia Country Club residents but on behalf of Sunrise Company. Our main priority is ensuring the long-term success of Andalusia, both the Club and the residential community.

After studying the new plan, we support the new plan and believe Travertine will enhance the surrounding communities and the overall La Quinta community. The Travertine community will also bring economic vitality to La Quinta for decades to come.

Thank you for your due diligence on this and all other developments.

Sincerely,

Randall Bone

Chief Executive Officer
Sunrise Company
